**Appointment Order**

**Mr. Bhagwat Gidhad,**

Following your application and subsequent interview for the post of **Assistant Professor-Mathematics**, I am pleased to inform you that the Management has appointed you as **Assistant Professor in Engineering Science Department at Dr. D Y Patil School of Engineering**. The terms & conditions of the appointment are as follows.

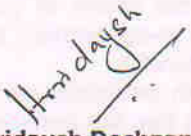

- 1) Your services are governed by the Maharashtra Universities Act, statues, ordinances, rules & regulations, code of conduct, laid down by the Savitribai Phule Pune University, Government of Maharashtra and service rules of the Trust and will be responsible to the Principal/Director of the Institute for discharge of your duties.
- 2) Your appointment is on **purely temporary basis** for a period of **Academic Year 2020-21 (i.e. upto 31<sup>st</sup> May 2021 only)** from the date of joining i.e. 01<sup>st</sup> September 2020.
- 3) You will be paid consolidated monthly salary of **Rs. 35,650 only (Rs Thirty Five Thousand Six Hundred Fifty Only)**. No other allowances will be admissible. The salary payment will be subject to statutory deduction of taxes as applicable.
- 4) Your appointment is subject to the minimum numbers of the students and the sufficient workload prescribed for the post.
- 5) Your appointment is on purely temporary basis and will automatically come to an end on the expiry of tenure and in any such event; you shall not claim any right to be continued in the services. You shall not claim to be a regular/permanent employee of the Institute/College. At any time during the tenure of your services or after termination thereof, in any manner whatsoever, and shall not claim automatic re-appointment to the said post after expiry of the tenure of your services and you will not be eligible for any retiral benefits.
- 6) You shall submit the certified true copies of relevant documents such as birth certificate, mark sheets, experience certificates, Approval Letters, reliving certificate, Aadhar Card, PAN card, Last Pay Slip from the previous Employer before joining the duties.
- 7) You will produce 2 passport size recent photographs.
- 8) You are required to give the correct mailing address as soon as you join your duties. It will be presumed that any letter sent by Registered Post Acknowledgement Due (RPAD) or Speed Post or E-Mail on the address given, shall be deemed to have been acknowledged duly signed by you.
- 9) You are entitled Casual Leave as per Rules & Regulation of DYPEECT, subject to changes from time to time.
- 10) You are entitled for Medical Leave only after completion of one-year regular services and as per Rules & Regulation of DYPEECT, subject to changes from time to time.
- 11) If you want to leave the service during the tenure of your appointment, you will have to give one month's notice in writing to the Management. A sum equal to your one months' salary will be deducted or you will need to deposit the same amount to employer in case you resign without serving a one months' notice period. It is desirable that being a teaching faculty, you do not leave the job when the academic session is in progress.
- 12) You will submit to the office the medical fitness certificate from the Registered Medical panel appointed by the DYPEECT before joining your duties.

- 13) You will not conduct or engage yourself in private tuitions or private coaching classes.
- 14) You will not engage yourself in any other paid job, full time, part time, honorary or otherwise during the continuance of your service in this Institute/College. You will not undertake any R & D or consultancy work and not register for any degree / diploma / certificate course without approval of the competent authority of the Trust.
- 15) You will not appear for any examinations/Admission without prior permission of the management in service.
- 16) You will not take any active part in the politics, neither involved directly or indirectly in illegal financial matters.
- 17) Your services are transferable within the trust organization only.
- 18) You will not directly or indirectly get yourself involved in any of the anti-activities against the management which may cause any harm to the institute/college or the management.
- 19) Your behavior with colleagues and entire institute/college staff should be polite, co-operative and gentle.
- 20) You will not form any union or organization amongst yourself and colleagues.
- 21) You will not process any letters either signed by you or signed jointly on any issues against the Management/Authorities without prior permission of the Principal/Director. Also, you will not approach to any authorities connected to the Institute/ College / Trust without prior permission of the Principal / Director.
- 22) You will put your grievances to the Management through Principal / Director only.
- 23) You will have to carry out the duties / work assigned to you by the Principal / Director and the Management besides your teaching work / routine work.
- 24) If you found absent continuously for more than 15 days without prior written permission from the Principal/Director, your services will stand terminated automatically and no further correspondence will be entertained thereafter.
- 25) Any information given in the application form if found incorrect contradictory at any time after the appointment, your services will be terminated forthwith, and no further correspondence will be entertained thereafter.
- 26) Progress Report: You will submit your academic progress report and other activities, seminars, presentation of papers, workshop, Self Appraisal etc. twice every year in the months of April and November.
- 27) If it is observed that your performance is not satisfactory / your behavior is not in the interest of the institute or College or trust / you commit breach of terms and conditions as mentioned in your appointment / you are found medically unfit (physically/mentally), your services shall be terminated without giving any notice period.
- 28) You will have to communicate your acceptance in writing to the Management/Director/Principal **within two weeks** from the date of receipt of Order of Appointment, failing which your appointment is liable to be withdrawal / cancelled. However, in case you need an extension of time limit for joining the duties you will have to apply in writing for grant of extension stating the reasons for the same and indicating the date on which you intend to join the duties. The request for grant of extension of time limit for joining the duties for the post shall be considered and you will be informed in the matter. The decision of the management of the **Dr. D Y Patil School of Engineering** shall be final.
- 29) If you are found guilty of violation of any terms & conditions mentioned above you will be liable for disciplinary action and punishment decided by the Management/Director/ Principal as provided in the Rules & Regulations.
- 30) In view of this appointment order, the previous appointment order/s stands cancelled.
- 31) Any dispute arises in the service will be dealt legally in jurisdiction of Pune City only.

## ADVANCED DATA STRUCTURES LABORATORY

### List of Assignments

#### Group A:

1. Beginning with an empty binary search tree, Construct binary search tree by inserting the values in the order given. After constructing a binary tree -
  - i. Insert new node
  - ii. Find number of nodes in longest path
  - iii. Minimum data value found in the tree
  - iv. Change a tree so that the roles of the left and right pointers are swapped at every node
  - v. Search a value
2. Convert given binary tree into threaded binary tree. Analyze time and space complexity of the algorithm.

#### Group B:

3. Write a function to get the number of vertices in an undirected graph and its edges. You may assume that no edge is input twice.
  - i. Use adjacency list representation of the graph and find runtime of the function
  - ii. Use adjacency matrix representation of the graph and find runtime of the function
4. You have a business with several offices; you want to lease phone lines to connect them up with each other; and the phone company charges different amounts of money to connect different pairs of cities. You want a set of lines that connects all your offices with a minimum total cost. Solve the problem by suggesting appropriate data structures.

#### Group C:

5. Consider telephone book database of N clients. Make use of a hash table implementation to quickly look up client's telephone number.
6. Implement all the functions of a dictionary (ADT) using hashing.  
Data: Set of (key, value) pairs, Keys are mapped to values, Keys must be comparable, and Keys must be unique  
Standard Operations: Insert (key, value), Find (key), Delete (key)

#### Group D:

7. Given sequence  $k = k_1 < k_2 < \dots < k_n$  of n sorted keys, with a search probability  $p_i$  for each key  $k_i$ . Build the Binary search tree that has the least search cost given the access probability for each key.

8. A Dictionary stores keywords & its meanings. Provide facility for adding new keywords, deleting keywords, updating values of any entry. Provide facility to display whole data sorted in ascending/ Descending order. Also find how many maximum comparisons may require for finding any keyword. Use Height balance tree and find the complexity for finding a keyword.

### **Group E:**

9. Read the marks obtained by students of second year in an online examination of particular subject. Find out maximum and minimum marks obtained in that subject. Use heap data structure. Analyze the algorithm

### **Group F:**

10. Department maintains a student information. The file contains roll number, name, division and address. Allow user to add, delete information of student. Display information of particular employee. If record of student does not exist an appropriate message is displayed. If it is, then the system displays the student details. Use sequential file to maintain the data.

### **Group G:**

11. Any application defining scope of Formal parameter, Global parameter, Local parameter accessing mechanism and also relevance to private, public and protected access. Write a Java program which demonstrates the scope rules of the programming mechanism.
12. Write a Java program which will demonstrate a concept of Interfaces and packages: In this assignment design and use of customized interfaces and packages for a specific application are expected.
13. Write a Java program for the implementation of different data structures using JAVA collection libraries (Standard toolkit library): at least 5 data structures are used to design a Suitable application.

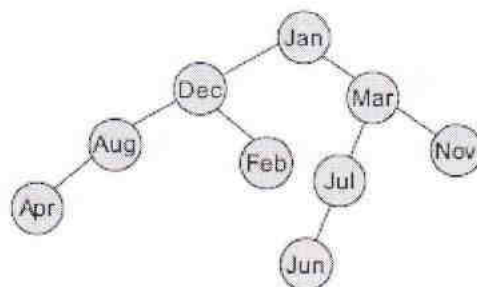

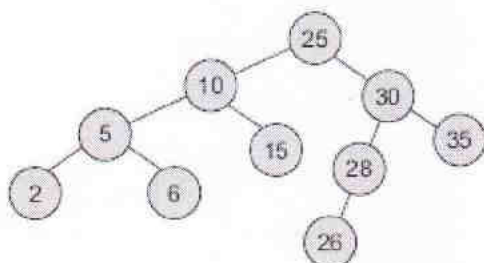

## Assignment 1:

### Problem Statement:

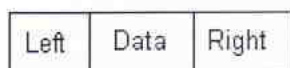

Beginning with an empty binary search tree, Construct binary search tree by inserting the values in the order given. After constructing a binary tree -

- i. Insert new node
- ii. Find number of nodes in longest path
- iii. Minimum data value found in the tree
- iv. Change a tree so that the roles of the left and right pointers are swapped at every node
- v. Search a value

Implementation:

A node in Binary Search tree will be represented as follows:

- Declare a structure to represent a node in the binary tree  
Struct BinTree

```

{
    struct BinTree *left;
    char data;
    struct BinTree *right;
};
  
```

- Display a menu with following options:
  1. Recursive Create
  2. Non – recursive create
  3. Insert New Node
  4. Find Height of the tree
  5. Smallest node value in the tree
  6. Mirror Image of the tree
  7. Search Value
  
- Read the choice & switch according to that
- If the choice is 1 or 2 create the root node & then give call to create function
- Otherwise pass the root node as the input parameter to the function

### **Rcreate () function:**

- Main () function has created the root node.
- Display the data for root node.
- Ask user if the new node is to be added to the left.
- If choice is yes
  - Create a new node
  - Read the data for new node
  - Initialize left & right pointers of the new node to NULL.
  - Attach this new node to the left of the root
  - Give recursive call to Rcreate () function with root->left as the new root.
- Display the data for root node.
- Ask user if the new node is to be added to the right.
- If choice is yes
  - Create a new node
  - Read the data for new node
  - Initialize left & right pointers of the new node to NULL.
  - Attach this new node to the right of the root
  - Give recursive call to Rcreate () function with root->right as the new root.
- End of Rcreate()

### **Nrcreate () function**

- Main () function has created the root node.
- Let temp & new node be two node structures  
while(1)

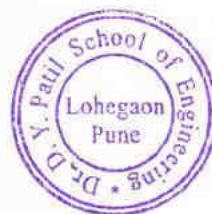

begin

initialize temp to point to Root

```

create a new node
initialize left & right pointer of new node to NULL
accept data for new node
while(1)
begin
    If newnode->data < temp->data
        If temp->left != NULL then
            temp = temp->left
        else
            temp->left = newnode
        break
    If newnode->data > temp->data
        If temp->right != NULL then
            temp = temp->right
        else
            temp->right = newnode
        break
    End
Ask user if more nodes are to be added to the tree
If the 'no' break;
End
➤ End of Nrcreate( )

```

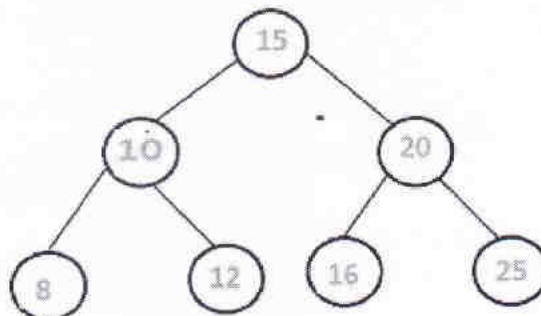

### Find Height of the tree-

There are two conventions to define height of Binary Tree

- 1) Number of nodes on longest path from root to the deepest node.
- 2) Number of edges on longest path from root to the deepest node.

In this post, the first convention is followed. For example, height of the below tree is 3.

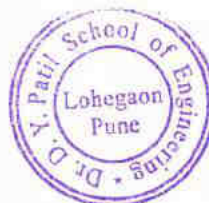

Recursive method to find height of Binary Tree is discussed here. How to find height without recursion? We can use level order traversal to find height without recursion. The idea is to traverse level by level. Whenever move down to a level, increment height by 1 (height is initialized as 0). Count number of nodes at each level; stop traversing when count of nodes at next level is 0.

#### Recursive Function-

```

int btree::nheight(node *root)
{
    int i, j, max=0;
    i=1, j=1;
    if(root!=NULL)
    {
        i=i+nheight(root->left);
        j=j+nheight(root->right);
        if(i>j)
            max=i;
        else
            max=j;
    }
}
  
```

```

    }
    return(max);
}

```

### **Non-recursive function-**

```

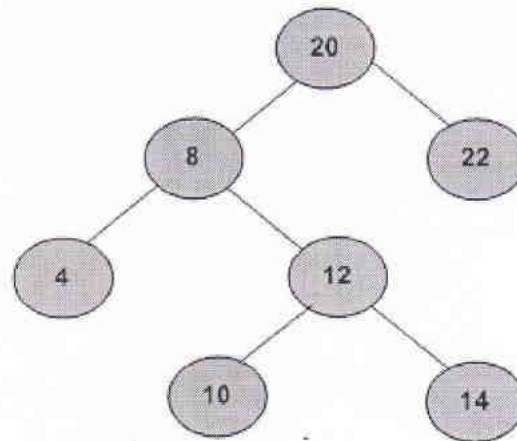

int BinaryTree :: TreeHeight(TreeNode *Root)
{
    int heightL, heightR;
    if(Root == Null)
        return 0;
    if(Root->Lchild == Null && Root->Rchild == Null)
        return 0;
    heightL = TreeHeight(Root->Lchild);
    heightR = TreeHeight(Root->Rchild);
    if(heightR > heightL)
        return(heightR + 1);
    return(heightL + 1);
}

```

### **Find the node with minimum value in a Binary Search Tree-**

This is quite simple. Just traverse the node from root to left recursively until left is NULL. The node whose left is NULL is the node with minimum value.

For the above tree, we start with 20, then we move left 8, we keep on moving to left until we see NULL. Since left of 4 is NULL, 4 is the node with minimum value.

In binary search tree, the smallest node is in the left side and the largest node is in the right side. To find the smallest node, the process will check the parent node. In case that the parent node is not empty, if it doesn't have a left child node, the smallest node is the parent node; otherwise the smallest node is its left child node.

#### Find Smallest Node function-( Non-recursive)

```

void btree::smallest(node* root)
{
    node *temp;

    temp=root;

    while(temp->left!=NULL)
        temp=temp->left;

    cout<<"\nMinimum data value="<<temp->data;
}
  
```

#### Find Largest Node function-( Non-recursive)

```

void btree::largest(node* root)
{
    node *temp;
  
```

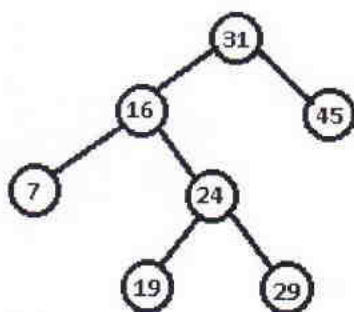

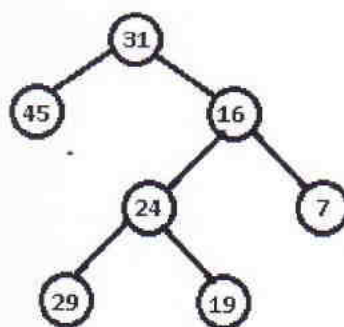

```
temp=root;
while(temp->right!=NULL)
    temp=temp->right;
cout<<"\nMaximum data value="<<temp->data;
}
```

### Getting Mirror, Replica, or Tree Interchange of Binary Tree

The Mirror() operation finds the mirror of the tree that will interchange all left and right subtrees in a linked binary tree.

**Original Tree**

**Mirror Tree**

### Recursive Function

```
void BinaryTree :: Mirror(TreeNode *Root)
```

```
{
```

```
    TreeNode *Tmp;
```

```
    if(Root != Null)
```

```
    {
```

```
        Tmp = Root->Lchild;
```

```
        Root->Lchild = Root->Rchild;
```

```
        Root->Rchild = Tmp;
```

```

        Mirror(Root->Lchild);

        Mirror(Root->Rchild);

    }

}

```

### **Mirror() Function (Non-Recursive) using Queue-**

Initialize a queue of nodes as empty

Initialize a pointer temp = root

Add(temp) to queue

while( queue not empty)

begin

temp = delete

if (temp->left != NULL)

add(temp->left)

if(temp->right != NULL)

add (temp->right)

change = temp->left

temp->Left = temp->right

temp->right = change

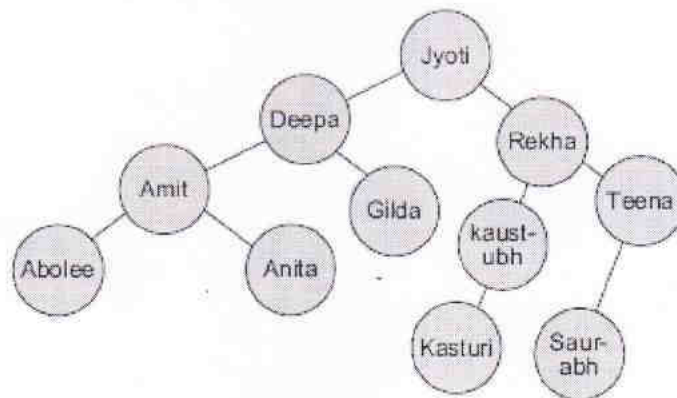

end

end

## Searching for a Key-

To search for a target key, we first compare it with the key at the root of the tree. If it is the same, then the algorithm ends. If it is less than the key at the root, search for the target key in the left subtree, else search in the right subtree. Let us, for example, search for the key 'Saurabh' in following Figure

We first compare 'Saurabh' with the key of the root, 'Jyoti'. Since 'Saurabh' comes after 'Jyoti' in alphabetical order, we move to the right side and next compare it with the key 'Rekha'. Since 'Saurabh' comes after 'Rekha', we move to the right again and compare with 'Teena'. Since 'Saurabh' comes before 'Teena', we move to the left. Now the question is to identify what event will be the terminating condition for the search. The solution is if we find the key, the function finishes successfully. If not, we continue searching until we hit an empty subtree.

Program Code shows the implementation of search () function, both nonrecursive and recursive implementations.

### Non-recursive-

```
TreeNode *BSTree :: Search(int Key)
```

```
{
```

```
    TreeNode *Tmp = Root;
```

```

    while(Tmp)
    {
        if(Tmp->Data == Key)
            return Tmp;
        else if(Tmp->data < Key)
            Tmp = Tmp->Lchild;
        else
            Tmp = Tmp->Rchild;
    }
    return NULL;
}

```

#### Recursive-

```

TreeNode *BSTree :: Rec_Search(TreeNode *root, int key)
{
    if(root == Null)
        return(root);
    else
    {
        if(root->Data < Key)
            root = Rec_Search(root->Lchild);
        else if(root->data > Key)
            root = Rec_Search(root->Rchild);
    }
}

```

**Conclusion:** Successfully implemented Binary search tree as an ADT using linked list in C++ language.

## Assignment 2:

### Problem Statement:

Write a program in C++ to create a binary inorder threaded tree & perform following tree traversals

1. In – order traversals
2. Pre – order traversals
3. Post – order traversals

### Implementation:

A node in threaded binary tree is represented as follows:

LBIT	LCHILD	DATA	RCHILD	RBIT
------	--------	------	--------	------

LBIT & RBIT are the two extra fields used to distinguish between threads & normal pointers.

LBIT(P) = 1           if LCHILD is a normal pointer

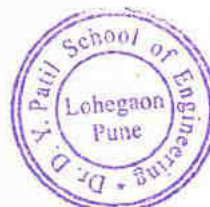

LBIT(P) = 0           if LCHILD is a thread

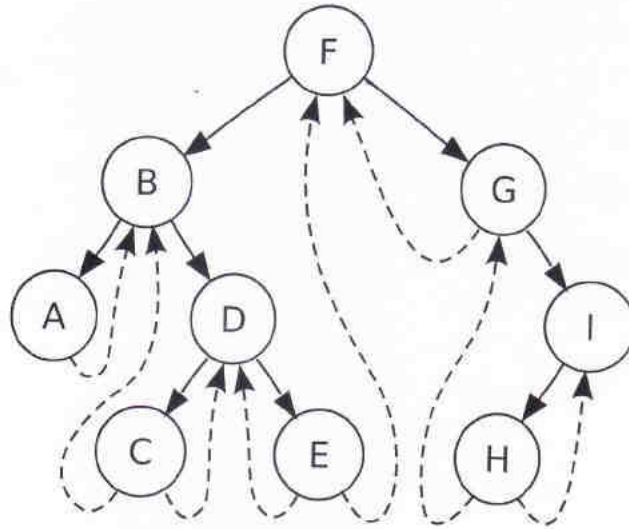

RBIT(P) = 1           if RCHILD is a normal pointer

RBIT(P) = 0           if RCHILD is a thread

Two NULL links LCHILD of leftmost node & RCHILD of right most node point to head node.

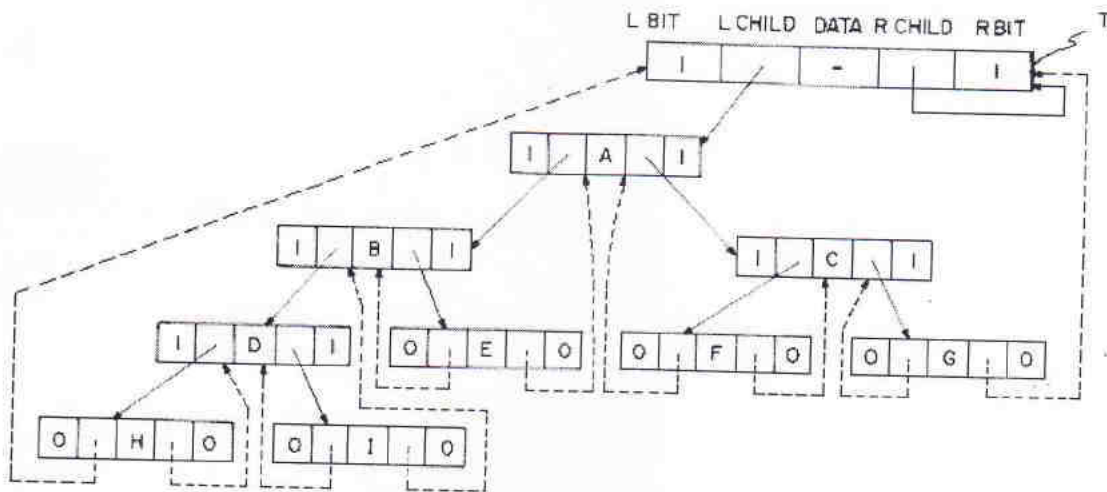

We consider that the complete tree is left subtree of head node.

In Threaded Binary Tree

Memory representation of Threaded inorder tree equivalent to given binary tree is:

**Create () Function:**

Getnode (parent)

Accept from user Data (parent)

Left(parent) = Head

Right(parent) = Head

```

Lbit(parent) = Thread
Rbit(parent) = Thread
Left(Head) = parent
while(1)
begin
    Ask user if more nodes are to be added to tree
    If no then break
    Getnode (newnode)
    Accept from user Data(newnode)
    Initialize Lbit (newnode) = Rbit (newnode) = Thread
    Initialize parent = left(head)
    while(1)
    begin
        Ask user if newnode is left or right of current parent
        If left
            If Lbit (parent) != thread then
                Parent = left (parent)
            Else
                Left(newnode) = left(parent)
                Right(newnode) = parent
                Left(parent) = newnode
                Lbit(parent) = pointer

## Experiment No. 1

### Estimation of Numerical Aperture of fiber

**Aim:** To Estimate Numerical Aperture (NA) of fiber

**Apparatus:** Optical trainer Kit, Numerical aperture scale, 1 meter fiber cable.

#### Theory:

For light rays to be propagated along a fiber they must fall within the fibers acceptance angle, the numerical aperture of the fiber is an indication of how much light fiber can accept to propagate through it. Numerical Aperture refers to the maximum angle at which the light incident on the fiber end is totally internally reflected and is transmitted properly along the fiber.

The cone formed by the rotation of this angle along the axis of the fiber is the cone of acceptance. The light ray should strike the fiber end within its cone of acceptance else it is refracted out of fiber cone.

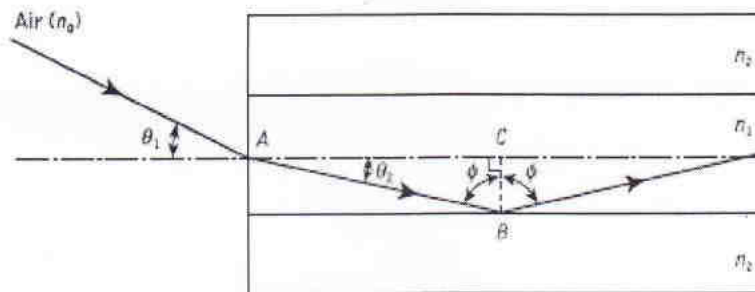

Fig.1. The Path for a meridional ray launched in to fiber

Above figure shows a light ray incident on the fiber core at an angle  $\theta_1$  to the fiber axis which is less than the acceptance angle for the fiber  $\theta_a$ . The ray enters the fiber from a medium (air) of refractive index  $n_0$ , and the fiber core has a refractive index  $n_1$ , which is slightly greater than the cladding refractive index  $n_2$ .

NA is defines for step index in air as

$$NA = n_0 \sin \theta_a = \sqrt{n_1^2 - n_2^2}$$

$\theta_a$  = maximum acceptance angle

$n_1$  = core refractive index

$n_2$  = cladding refractive index

It is assumed that light is incident on fiber end face from air with refractive index ( $n_0$ ) of unity. The numerical aperture can also be defined in terms of relative refractive index difference ( $\Delta$ ) as,

$$NA = n_1 \sqrt{2\Delta}$$

**Procedure:**

1. Switch on the power supply.
2. Adjust fiber such that it just touch light source.
3. Take reading on vertical scale as reference reading.
4. Adjust distance 'L' between fiber and light source to 10mm.
5. Adjust fiber in horizontal position such that we get maximum volt meter reading and take vernier scale reading.
6. Now we have to take reading at different horizontal positions. Practically
7. Maximum angle of incidence of light corresponds to half power point, that is when volt meter reading is 0.5 times the max reading. So adjust fiber at different horizontal points using vernier for horizontal movement.
8. Take vernier scale reading when voltmeter reading is 0.5 times max reading. This reading is D1.
9. Similarly take reading in opposite direction say D2.

Now refer to diagram

$$N.A = \sin(\tan^{-1}[D/2L])$$

Where,

$$D = D2 - D1 \text{ or } D1 - D2$$

L = distance between fiber and light source.

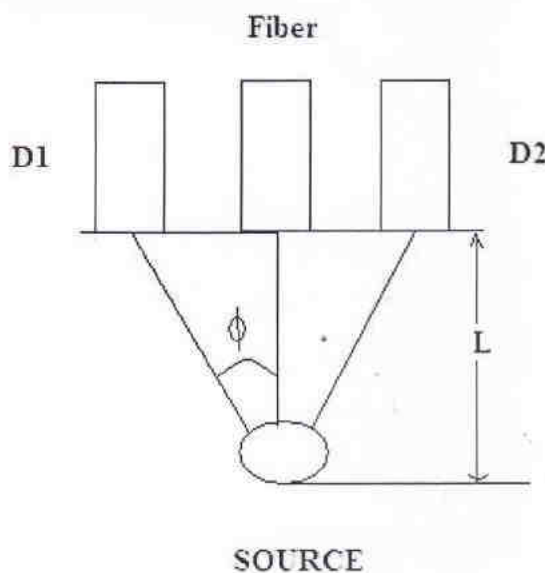

Fig.2. Experimental setup for measurement of NA of fiber.

- 10. Repeat the procedure at L=20mm.
- 11. Calculate average value of N.A.

**Observation Table:**

### Plot the characteristics of various sources and detectors

**Aim:** A) To plot the Electrical & optical characteristics of LED as a light source.

B) To plot V-I characteristics and photo diode as a light detector.

**Apparatus:** Trainer kit, DSO, connecting probes.

**Theory:** In Optical communication system, electrical signal is first converted into optical signal with the help of E/O conversion device such as **LED (Light Emitting diode) & LASER diode**. After this optical signal is transmitted through optical fiber, it is then retrieved in its original form with the help of O/E conversion device which is a **photo detector**.

- A LED is semiconductor device that emits light when an electric current is applied to it. LED contains a P-N junction, which is forward bias when LED is operating.

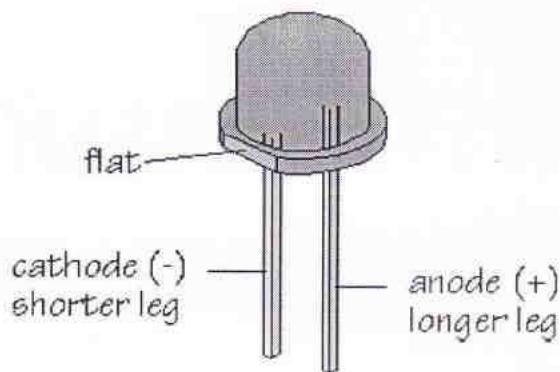

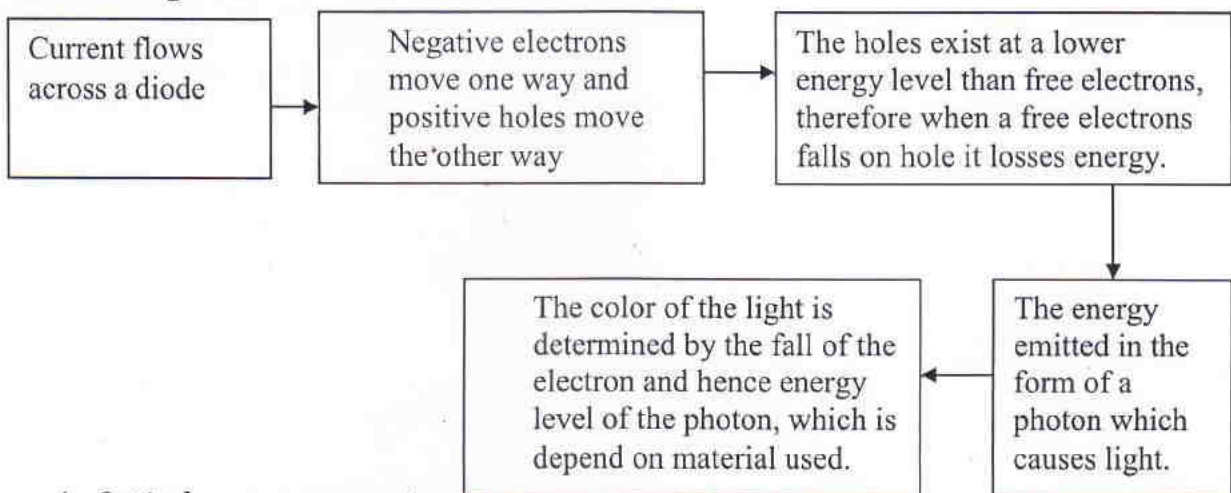

Fig.1. LED & its connections

#### How a Led glows?

1. Optical source converts

the electrical energy into equivalent optical source, when P-N junction is forward biased. It is achieved by LED & LASER based on principle of photon emission. Photon emission takes place when electrons fall back from conduction band to valance band.

2.

CONDUCTION BAND

ENERGY GAP

VALENCE BAND

3. The wavelength of light emitted & its color depends on the band gap energy of the materials forming P-N junction.
4. LED uses spontaneous emission process of light, in which there is random emission of light in surrounding direction.
5. The various impurities added during doping process to establish wavelength of the emitted light. The wavelength determines the color of the light & if it is visible or invisible (infrared).
6. LEDs are made up of Gallium Arsenide (GaAs), Gallium Arsenide phosphide (GaAsP) or Gallium phosphide (GaP).
7. GaAs LED emit infrared radiation which is invisible.
8. GaAsP produces either red or yellow visible light.
9. GaP produces red or green visible light.
10. Forward voltage in silicon diode is 0.7 volts & in LEDs it is always greater in between 1.2V & 3.2V. Reverse breakdown for LED is much less.

**Note:** The silicon & germanium diode does not show optical emission because they are essentially heat producing Materials & are very poor at producing light. & also because silicon & Germanium are indirect band gap material & the material used for LED have direct band gap.

Indirect band gap: a semiconductor with an indirect band gap, showing that an electron cannot shift from the lowest-energy state in the conduction band to the highest-energy state in the valence band without a change in momentum.

Direct band gap: a semiconductor with a direct band gap, showing that an electron can shift from the lowest-energy state in the conduction band to the highest-energy state in the valence band without a change in crystal momentum. Typical indicator LEDs require no more than 30-60milliwatts of electrical power.

#### Types of LED:

Following are types of LED,

- 1) Dome LED
- 2) Surface emitting LED
- 3) Edge emitting LED

**B)**  
**Theory:**

The basic detection process in an intrinsic absorption is illustrated is shown in the following figure, which shows a p-n photodiode. This device is reverse biased and the electric field developed across the p-n junction sweeps mobile carrier (holes and electrons) to their respective majority sides (p and n type material). A depletion region or layer is therefore created on either side of the junction. This barrier has the effect of stopping the majority carriers crossing the in opposite direction to the field. However, the field accelerates minority carriers from both sides to the opposite side of the junction forming the reverse leakage current of the diode Thus intrinsic conditions are created in depletion region

A photon incident in or near the depletion region of this device which has an energy greater than or equal to the band gap energy ( $E_g$ ) of the fabricating material (i.e.  $hf \geq E_g$ ) will excite electron from the valence band and is known as the photo generation of an electron-hole (carrier) pair, as shown in following figure,

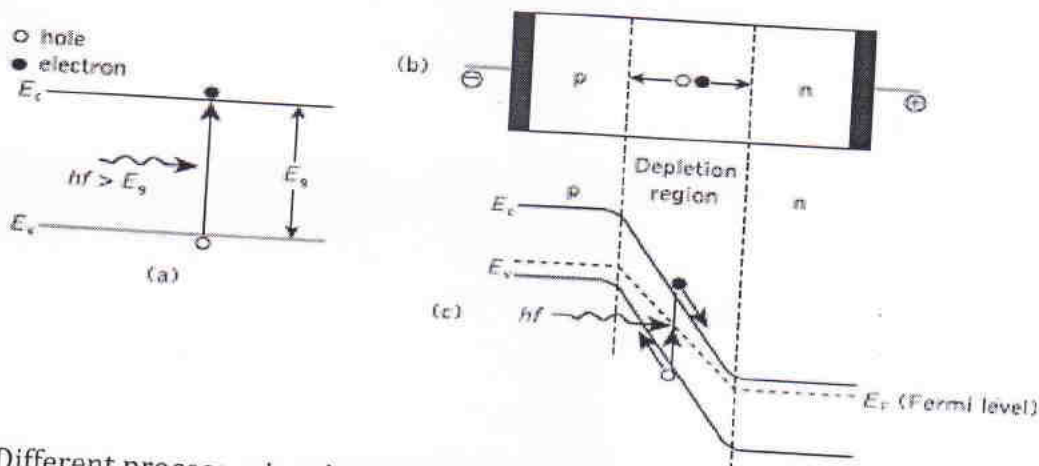

Fig.1. Different processes involved in detection of light signal by a photodiode.

Carrier pairs so generated near the junction are separated and swept (drift) under the influence of the electric to produce a displacement by the current in the external circuit in access of any reverse leakage current.

Photo generation and the separation of a carrier pair generation. However since long carrier drift times in the depletion region restrict the speed of operation of the photodiode it is necessary to limit its width. Thus, there is tradeoff between the no. of photons absorbed (sensitivity) and the speed of response.

**Procedure:**

1. Switch on the power supply.
2. Connect the optical transmitter in test circuit.
3. Connect anode of transmitter to voltmeter and cathode to current meter.
4. Vary voltage and current using pot.
5. Plot the graph of voltage and current.
6. Also observe optical characteristics by connecting optical fiber cable between transmitter and receiver of optical power meter.
7. Vary current using pot and take readings of power.
8. Plot the graph of voltage and current.
9. For V-I characteristics of receiver adjust transmitter current to 15 mA.
10. Connect optical receiver in reverse bias condition.
11. Connect anode to current meter and cathode to voltmeter.
12. Connect fiber cable between transmitter and receiver.
13. Vary voltage and current using pot and plot the graph.
14. Repeat the procedure for different transmitter current.

#### **Measure attenuation of MMSI and SMSI fiber and comment on the result based on attenuation due to increase in length.**

**Aim:** Measure attenuation of MMSI and SMSI fiber and comment on the result based on attenuation due to increase in length.

**Apparatus:** Optical trainer kit, optical fiber cables of different length, DSO

**Theory:**

The attenuation or transmission loss of optical fibers has proved to be one of the most important factors in bringing about their wide acceptance in telecommunications. As channel attenuation largely determined the maximum transmission distance prior to signal restoration

Attenuation is loss of power. During transmission, light pulse lose some of their photons, thus reduce their amplitude. Attenuation for a fiber is usually specified in decibels per kilometer. For commercially available fibers attenuation ranges from 1 dB / km for premium small-core glass fibers to over 2000 dB / Km for a large core plastic fiber.

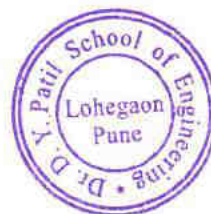

Loss is by definition indicated by negative decibels. In common usage, discussions of loss omit the negative sign. The basic measurement for loss in a fiber is done by taking the logarithmic ratio of the input power ( $P_i$ ) to the output power ( $P_o$ ).

$$\alpha_{(dB)}L = 10 \log_{10} \frac{P_i}{P_o}$$

Where  $\alpha$ (dB) is the signal attenuation per unit length in decibels which is also referred to as the fiber loss parameter and  $L$  is the fiber length.

A number of mechanisms are responsible for the signal attenuation within optical fiber. These mechanisms are influenced by the material composition, the preparation and purification technique and the waveguide structure. They may be categorized within several major areas which include material absorption, material scattering (linear and nonlinear scattering), curve and micro bending losses, mode coupling radiation losses and losses due to leaky modes. There are also losses at connectors and splices. For a low loss single mode fiber the graph of attenuation with respect to wavelength is as shown in fig.1.

The attenuation in a fiber can be reduces by using techniques like, use of proper fabrication techniques like vapor phase axial deposition. It can also be reduced by using a good quality material for fiber manufacturing.

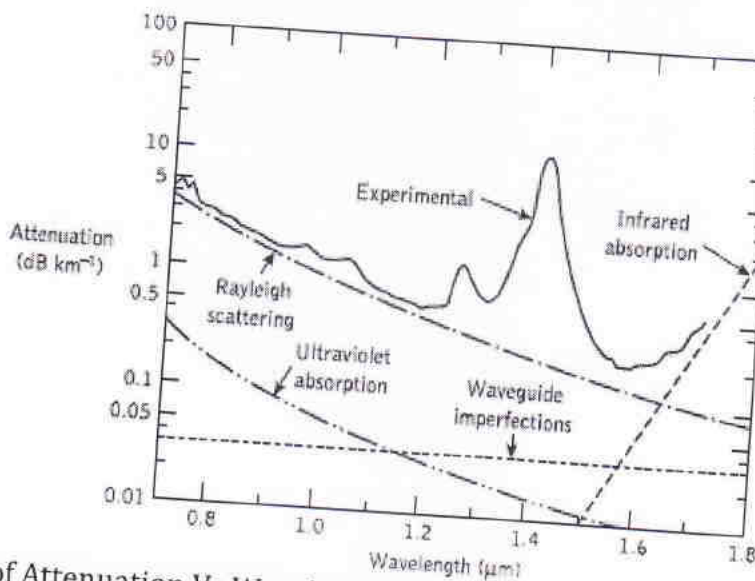

Fig.1. Graph of Attenuation Vs Wavelength for a single mode fiber.

**Procedure:**

1. Switch on the power supply.
2. Adjust output of signal generator to 1 Vpp using amplitude adjust pot and connect it to input of optical transmitter.
3. Connect 0.33 meter fiber cable between optical transmitter and receiver.
4. Measure output of receiver (peak to peak) say V1.
5. Similarly repeat this procedure for 0.66 m and 1m fiber cable and measure output of receiver say V2 and V3 resp.
6. Calculate attenuation loss using following procedure-
  - a) Loss 1 =  $20\log(V1/V2)$  dB
  - b) Loss 2 =  $20\log(V2/V3)$  dB
  - c) Loss 3 =  $20\log(V1/V3)$  dBWhere,  
V1=output for 0.33m fiber  
V2=output for 0.66m fiber  
V3=output for 1m fiber
7. Calculate the avg. loss per 1m of fiber cable as  
Avg. loss =  $[Loss\ 3 + Loss\ 2 + Loss\ 1] / 3$  in dB/m

**OBSERVATION TABLE:**

**1.  $V_{in} =$**

### Experiment No. 4

#### Transmission of Digital signal through fiber optic link

**Aim:** To Study Transmission of Digital signal through fiber optic link.

**Apparatus:** Experimental kit, DSO, Optical fiber cable.

#### Theory:

The non-linearity within the emitter LED & photo transistor causing distortion of the signal at the receiver output are the disadvantages associated with amplitude modulating a light source by analog means. Linearity is not a problem if the light beam is switched 'On' & 'Off' with a digital signal, since the detector output is simply squared up by a comparator circuit. To overcome problems associated with amplitude modulation of a light beam by analog means, analog signals are often used to vary or modulate some characteristic of a digital signal (e.g. frequency or pulse width.). The digital signal being used to switch the light beam 'On' & 'Off'.

#### DIGITAL OPTICAL LINK:

In this link we have use digital fiber link. Ckt diagram is given on next page at optical transmitter we have used RED LED and transistor as switch. When input to transistor is high, there is no light output and when input is low light is emitted. This light is coupled to optical receiver through one meter length, secondary coated plastic fiber. At receiver we have used TLL 81 phototransistor, amplifier and again switching transistor.

When light fall on optical receiver input to switching transistor is high and so final output of link is low, and when no light fall input to switching transistor is low and so final output is high. in this way we get same output at receiver which we have given to transmitter.

The bandwidth is depends on  $T_r$  (rise time),  $T_f$  (fall time) and value of load resistance in detector circuit. We have provided pattern generator with variable clock frequency. At detector two load resistances R1 (1K) and R2 (4.7K) are provided. You can observe effect of value of load resistance on B.W.

#### Procedure:

1. Switch On the power supply.
2. Connect 5V to input of optical transmitter. Observe output at anode of transmitter and cathode of optical receiver and final receiver output.
3. Connect ground to input of optical transmitter. Observe output at anode of transmitter and cathode of optical receiver and final receiver output.  
Now to observe effect of value of load resistance on BW:
4. Keep frequency of clock generator minimum.
5. Connect pattern (P1 or P2) output to input of transmitter.

6. Observe waveform at anode of optical transmitter with input pattern on dual scope CRO, it is inverted.
7. Connect fiber cable between optical transmitter and receiver.
8. Connect anode of optical receiver to R1 1K as RL.
9. Observe output at anode of optical receiver.
10. Observe output at OP-AMP amplifier.
11. Observe final output of receiver. It is same as input pattern.
12. Now increase clock frequency from minimum to maximum and observe its effect on final output of receiver.
13. Repeat steps 8-12 for R2 (4.7K).
14. What is your observation, as RL increases bandwidth decreases.

**Observations:**

#### **Establishing a direct communication link between Uplink Transmitter and Downlink Receiver using tone signal.**

**Aim:-** To establish a direct communication link between Transmitter and downlink receiver using tone Signal.

**Apparatus:-** Satellite Transmitter, Satellite Transponder, Satellite Receiver, connecting cords, antennas.

#### **Theory:**

##### **Uplink Transmitter:**

In uplink station the signal has to be sent at a different frequency usually in higher 1GHz band to avoid interference with link signal. Another function performed by uplink station is to control highly internal function of satellite. up links are controlled so that transmitted micro wave beam is extremely narrow in order not to interface with adjacent satellite.

##### **Transponder:**

Each satellite has a number of transponder with access to a pair of receive / transmit antennas and associated electronics for each channel. For example in Europe the uplink sends a signal at a frequency of about 14 GHz. These are received downlink converted in frequency of about 11/ 12 GHz and boosted by high power amplifier for retransmission to earth. Separate transponders are used for each channel and are powered by solar panels with backup batteries for eclipse protection.

##### **Down Link Receiver:**

The medium used to transmit signal from satellite to earth is microwave electromagnetic radiation which is much higher in frequency normal broadcast TV signal in VHF / UHF bands. Microwave still exhibit a wave like nature, but inherit a tendency to serve attenuation by water vapors or any obstruction in line of sight of antenna. The transmitted micro wave power is extremely weak by the time it reaches earth and unless well designed equipment is used and certain installation precaution are taken, the back round noise can ruin the signal.

##### **Antenna:**

To radiate or receive electromagnetic waves an antenna is required. Antenna is system of elevated conductors which couples or matches the transmitter or receiver to free space. A transmitting antenna connecting to a transmitter by transmission line, forces electromagnetic waves in to free space which travel in space with velocity of light.

The medium used to transmit signal from satellite to earth is microwave electromagnetic radiation which is much higher in frequency normal broadcast TV signal in VHF / UHF bands. Microwave still exhibit a wave like nature, but inherit a tendency to serve attenuation by water vapors or any obstruction in line of sight of antenna. The transmitted micro wave power is extremely weak by the time it reaches earth and unless well designed equipment is used and certain installation precaution are taken, the background noise can ruin the signal.

### Antenna:

To radiate or receive electromagnetic waves an antenna is required. Antenna is system of elevated conductors which couples or matches the transmitter or receiver to free

space. A transmitting antenna connecting to a transmitter by transmission line, forces electromagnetic waves in to free space which travel in space with velocity of light.

### To communicate voice signal through satellite Link

**Aim:-** To communicate voice signal through satellite Link.

**Apparatus:-** Satellite Trainer kit, connecting cords.

#### Theory:

**MIC :** It is input device ,used to to get voice signal as an input.

#### Uplink Transmitter:

In uplink station the signal has to be sent at a different frequency usually in higher 1GHz band to avoid interference with link signal. Another function performed by uplink station is to control highly internal function of satellite. up links are controlled so that transmitted micro wave beam is extremely narrow in order not to interface with adjacent satellite.

#### Transponder:

Each satellite has a number of transponder witch access to a pair of receive / transmit antennas and associated electronics for each channel. For example in Europe the uplink sends a signal at a frequency of about 14 GHz. These are received downlink converted in frequency of about 11/ 12 GHz and boosted by high power amplifier for retransmission to earth. Separate transponders are used for each channel and are powered by solar panels with backup batteries for eclipse protection.

#### Down Link Receiver:

## EXPERIMENT NO. 1

### Trial on Gear Pump and Plotting Of Performance Characteristics

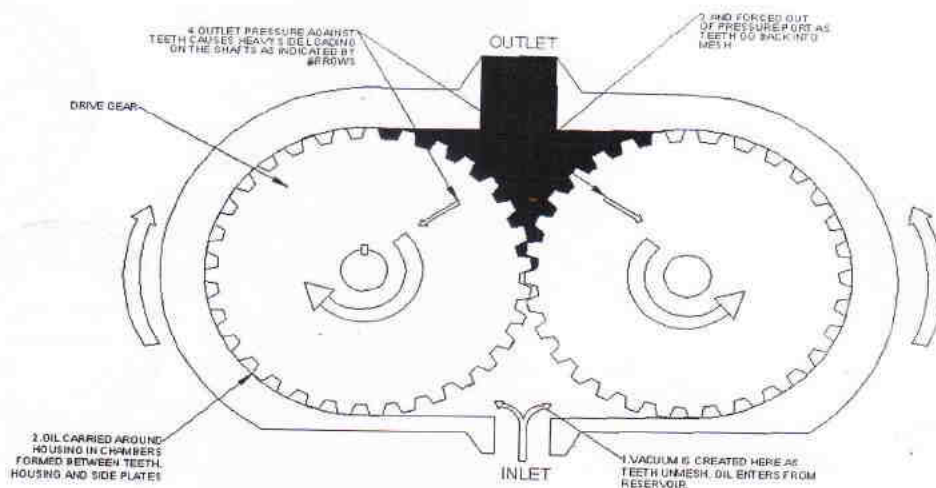

**Aim:** To conduct test on Gear Pump and plotting performance characteristics.

**Apparatus:** Gear pump with electric motor, pressure relief valve, control valve, reservoir, measuring tank with scale, pressure gauge and vacuum gauge.

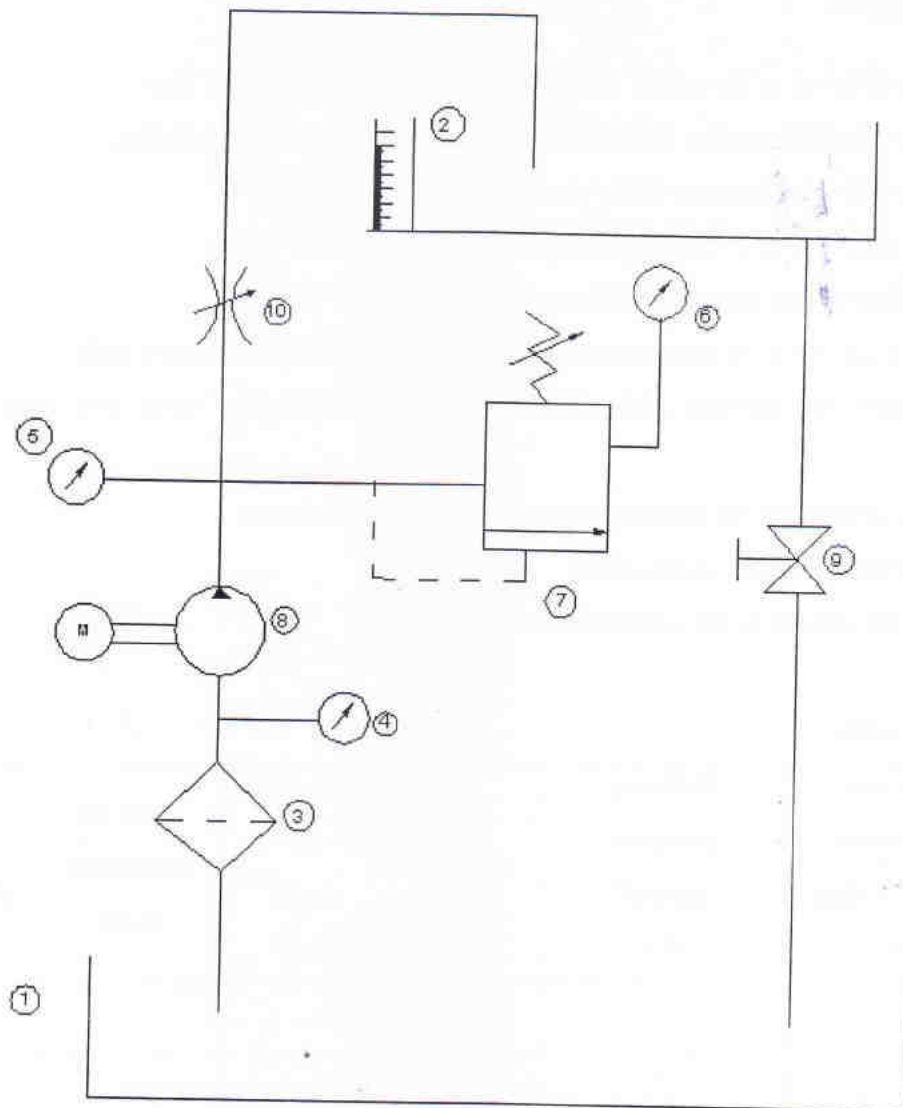

**Theory:**

#### External Gear Pump

The operation of an external gear pump, which develops flow by carrying fluid between the teeth of two meshing gears, is shown in the figure 2.1. One of the gears is connected to a drive shaft connected to the prime mover. The second gear is driven as it meshes with the driver gear. Oil chambers are formed between the gear teeth, the pump housing and the side wear plates. The suction side is where teeth come out of the mesh and it is here that the volume expands, bringing about a reduction in pressure below atmospheric pressure. Fluid is pushed into this void by atmospheric pressure because the oil supply tank is vented to the atmosphere. The discharge side is where teeth go into mesh and it is here that the volume decreases between mating teeth. Since the pump has a positive internal seal against leakage, the oil is positively ejected into the outlet port.

**Operation procedure:**

1. Check the oil level in the sump. Initially the bypass valve must be open.
2. Switch on the main supply. Let the system run for 2-3 min for stabilizing.
3. Adjust the delivery pressure using pressure regulating valve.
4. Close the drain valve of the measuring tank; level will start rising.
5. Note the readings as per observation table.
6. Open the drain valve of measuring tank for draining the oil in the sump tank.
7. Again adjust the delivery pressure using pressure regulating valve and note down the readings.
8. Repeat the procedure for different settings of delivery pressure.
9. Switch off the electrical connections.
10. Calculate the results as per calculation procedures.

## Experiment No 2

**Aim:** To study regenerative, speed control, sequence and transverse feed circuit.

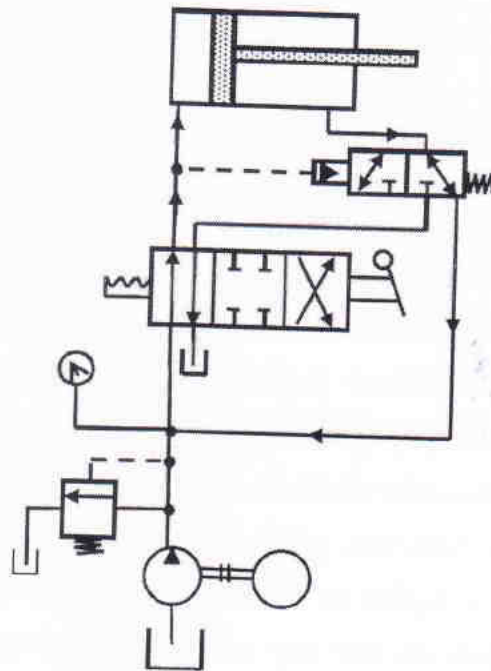

**Theory:**

### 1) Regenerative circuit

Figure 1 shows a regenerative circuit that automatically switches off regeneration when full force is necessary. This circuit could be used in a hydraulic press where the cylinder must extend quickly under no load, then bottoms out and must apply full force to the work piece. Instead of using a four-way with a regenerative neutral, this circuit uses a four-way DCV in conjunction with a three-way, pilot-operated DCV. The three-way valve is shifted when sufficient pressure is applied to its pilot line, which is connected to the blind end of the cylinder. In the figure, the four-way valve is shifted to the left position and flow is sent to the blind end of the cylinder. Because the cylinder is not loaded, the pressure in the blind end is very low and is not sufficient to shift the three-way valve. The flow from the rod end combines with the pump flow, causing the cylinder to extend rapidly. When the cylinder bottoms out, pressure immediately builds up in the blind end line to the relief valve setting because there is no other path for pump flow. The three-way valve is then shifted into the left position and pressure is relieved from the rod side because it is connected to the tank port. The pressure is then applied to the blind side that causes full force to be applied to the work piece. When the four-way DCV is shifted into the right position, the cylinder retracts at a normal speed. In this circuit, the reduction in force capability caused by regeneration is not an issue because during the regeneration portion of the cycle, the cylinder is not loaded. The primary advantage of using regeneration is that a smaller pump can be purchased that is less expensive to buy and operate.

**Fig.2.1 Regenerative circuit**

## 2) Speed control unit

In hydraulic operations, it is necessary to control the speed of the actuator so as to control the force, power, timing and other factors of the operation. Actuator speed control is achieved by controlling the rate of flow into or out of the cylinder.

Speed control by controlling the rate of flow into the cylinder is called meter-in control. Speed control by controlling the rate of flow out of the cylinder is called meter-out control.

### A) Meter-in flow control system:

Figure 2 shows a meter-in circuit with control of extend stroke. The inlet flow into the cylinder is controlled using a flow-control valve. In the return stroke, however, the fluid can bypass the needle valve and flow through the check valve and hence the return speed is not controlled. This implies that the extending speed of the cylinder is controlled whereas the retracing speed is not.

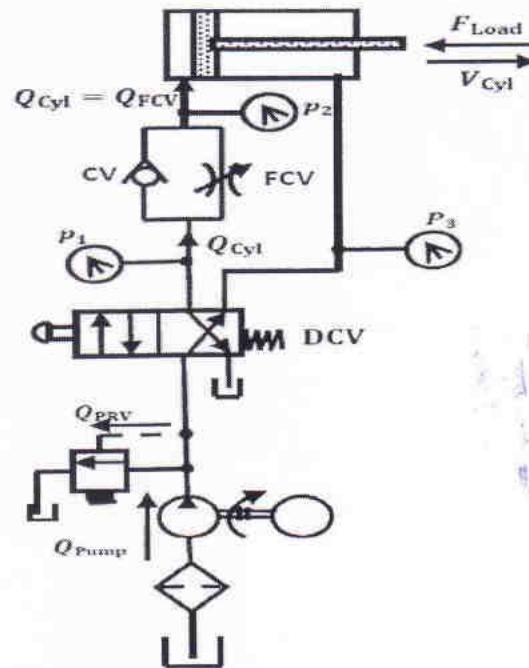

Fig.2.2 Meter in flow circuit

**B) Meter-out flow control system:**

Figure 3 shows a meter-out circuit for flow control during the extend stroke. When the cylinder extends, the flow coming from the pump into the cylinder is not controlled directly. However, the flow out of the cylinder is controlled using the flow-control valve (metering orifice). On the other hand, when the cylinder retracts, the flow passes through the check valve unopposed, bypassing the needle valve. Thus, only the speed during the extend stroke is controlled.

Both the meter-in and meter-out circuits mentioned above perform the same operation (control the speed of the extending stroke of the piston), even though the processes are exactly opposite to one another.

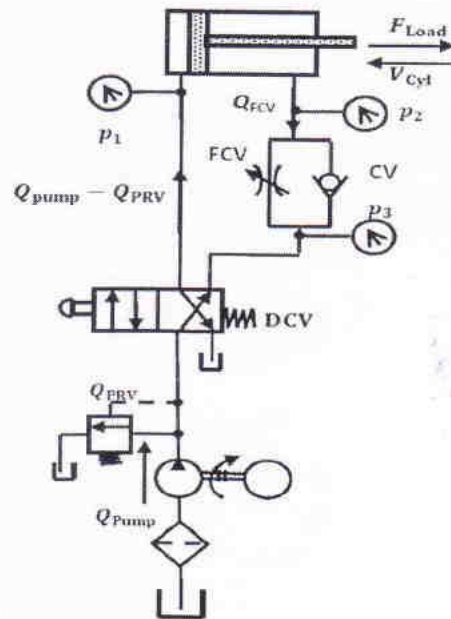

Fig.2.3 Meter out circuits

3) Sequencing circuit:

The hydraulic circuit shown in Fig. is an example of an application of a sequence valve in which a clamp cylinder extends first to hold a work piece and then a second cylinder extends to bend the work piece in the desired shape.

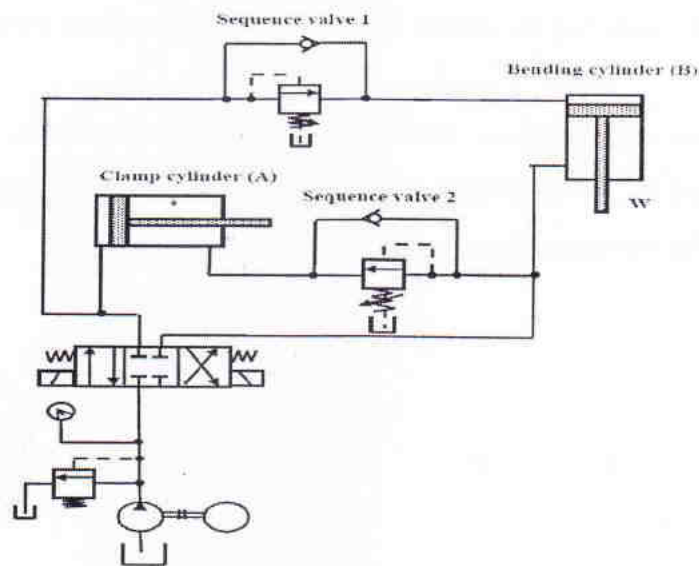

Fig.2.4 sequencing circuit

*Hydraulic & Pneumatics (BE, 2015 Course)*  
*Laboratory Manual*

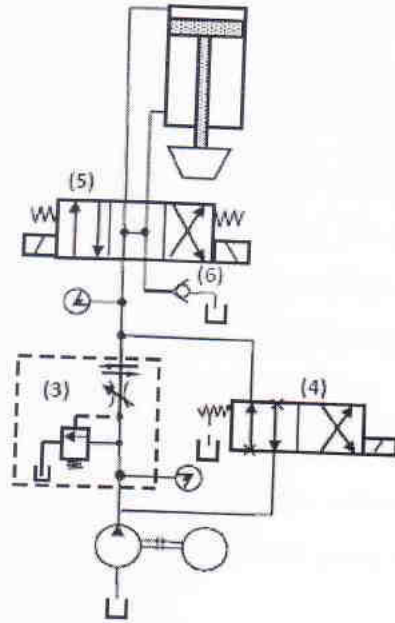

In this circuit, two cylinders are connected in parallel. Without the sequence valve, these cylinders would extend together as they are both unloaded. In order for this circuit to function properly, the clamp cylinder must extend completely before the bending cylinder begins to extend. The sequence valve accomplishes this by not allowing flow into the bending cylinder branch of circuit until the clamp cylinder has reached the end of its stroke. When the clamp cylinder extends completely, the pressure rises and opens the sequence valve, thus allowing the bending cylinder to extend. The sequence valve must be set high enough so that it opens only after the complete extension of the clamp cylinder.

During the retraction of cylinders, the check valve allows the sequence valve to be bypassed. The sequence valve has no effect on the circuit in this situation. Both cylinders retract together because both are unloaded and split the pump flow.

**Transverse and feed circuits:**

Circuit for Fast Approach and Slow Die Closing A machine intended for high volume production has a high piston velocity. If not controlled, the high-speed platen approaching the job instead of making a smooth contact will bang on the job. This is not desirable. In all such cases, "rapid transverse and feed circuits" are employed. Pump delivery normally passes through FCV (3). During fast approach, the solenoid-operated DCV (4) is energized. This diverts pump delivery to the cap end of the cylinder through valve (4). Full flow is thus available for the actuator to advance at the rated speed. A few millimeters before the platen makes contact with the die, solenoid valve (4) is de-energized forcing the pump delivery to pass through FCV (3). The platen now approaches the die at a controlled speed because the flow to cylinder (6) is now regulated. Directional valves (4) and (5), however, must be energized simultaneously for the approach phase to begin.

**Fig.2.5 Transverse and feed circuit**

## Experiment No. 3

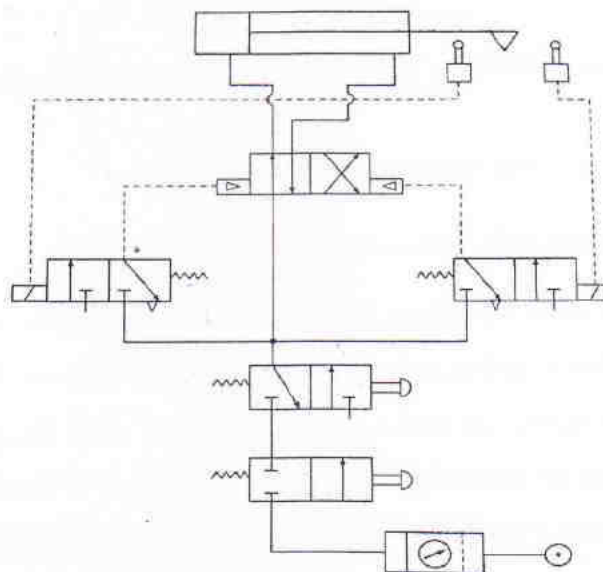

### Pneumatic trainer

**Aim:** - To study pneumatic circuits.

1. Automatic reciprocating circuit.
2. Speed control circuit.
3. Pneumatic circuit involving quick exhaust valve.
4. Electro – Pneumatic valves and circuit.

**Theory:- 1. Automatic reciprocating circuit:**

Depending on various tools jigs and fixtures, the cylinder and circuit has to be operated in particular sequence. Fig shows a circuit in which a double acting cylinder (DCV) reciprocating automatically when actuating signal is given to push button operated 3/2 DC valve as shown in fig. allows desired motion forward by valve and backward . Various modes of pneumatic circuit help to determine desired sequencing of cylinder moment sequencing could be achieved mechanically or electro-pneumatically by distributing and transmitting signals from a no. of pilot valves which may be actuated by spring action then inline off motion of piston rod in pneumatic system.

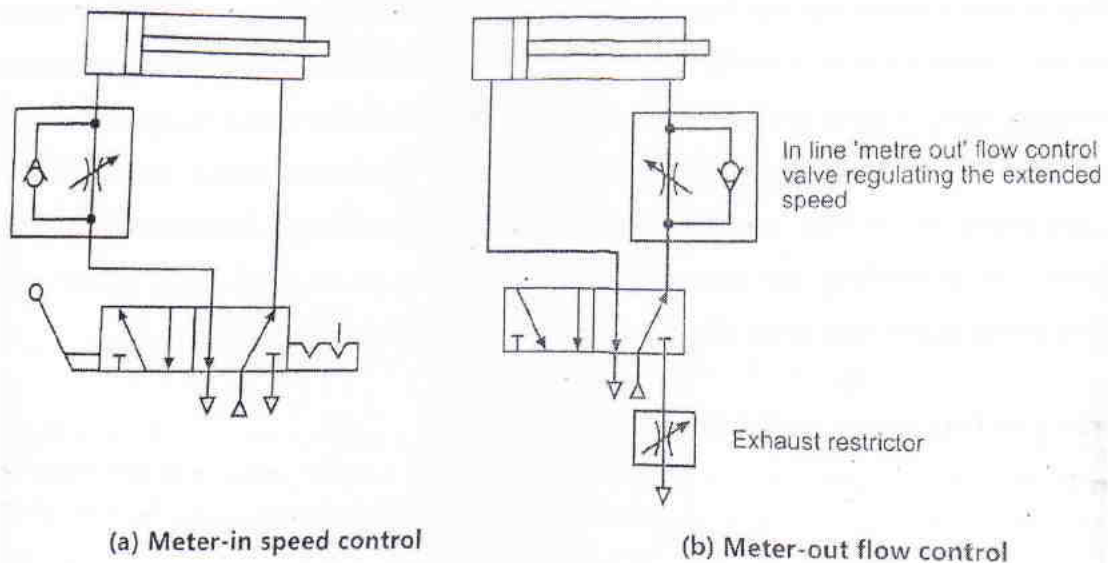

**Fig. 3.1 Automatic reciprocating circuit**

**2. Speed control circuit:**

The velocity of the pneumatic cylinders or motors depends on the volume of the air entering and leaving the cylinder. But air is compressible fluid. Hence volume of the given mass of air changes with temperature and pressure. Temperature variation across the actuator system is small and its effect is neglected. The effect of pressure can vary as the load and flow rate changes. For control of speed of actuators either the quantity entering the piston side is controlled (meter in). For this purpose, flow control valve and check valve (to permit free flow in the other direction where air flow is not controlled) are used.

**Fig. 3.2 Speed Control Circuits**

**3. Pneumatic circuit involving quick exhaust valve:**

The quick exhaust valve is used to exhaust the cylinder air quickly to atmosphere. Schematic diagram of quick exhaust valve is shown in Figure 1. In many applications, it is a common practice to increase the piston speed during retraction of the cylinder to save the cycle time. The higher speed of the piston is possible by reducing the resistance to flow of the exhausting air during the motion of cylinder. The resistance can be reduced by expelling the exhausting air to the atmosphere quickly by using Quick exhaust valve. Typical applications of quick exhaust valves for single acting and double acting cylinders are shown in Figure 2.

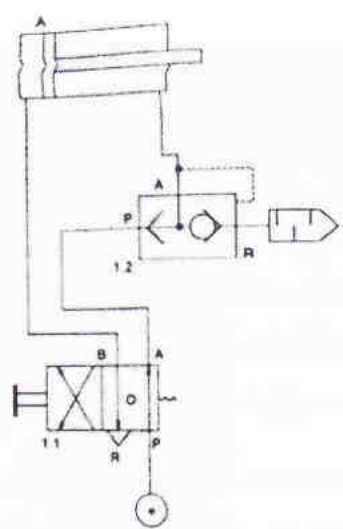

Fig. 7.12 Use of quick exhaust valve: A—D.A. cylinder 1.1 4/2 D.C. valve 1.2 Quick exhaust valve

Fig.2. Application of Quick Exhaust Valve.

## Experiment No.4

**Aim:** Test on Pressure relief valve

**Construction and operation:**

The mostly widely used type of pressure control valve is the pressure relief valve (PRV), since it is found in practically every hydraulic system. It is normally a closed valve whose function is to limit the pressure to a specified maximum value by diverting pump flow back to the tank.

Fig. 1-a&1-b shows the operation of a simple relief valve. A poppet is held seated inside the valve by the force of a stiff compression spring. When the system pressure reaches to a high enough value, the resulting hydraulic force (acting on the piston-shaped poppet) exceeds the spring force and the poppet is forced off its seat. This permits flow through the outlet to the tank as long as this high pressure is maintained. Note the external adjusting screw, which varies the spring force and thus the pressure at which the valve begins to open (cracking pressure). Fig.(1-b) also shows the graphic symbol of a simple PRV.

It should be noted that poppet must open sufficiently to allow full pump flow. The pressure that exists at full pump flow can be substantially greater than the cracking pressure. This is shown in Fig 2, where system pressure is plotted versus flow through the relief valve. The stiffness of the spring (force required to compress the spring 1 in or 1 cm) and the amount poppet must open to permit full pump flow determine the difference between full pump flow pressure and the cracking pressure. The stiffness of the spring is called a spring constant and has a unit of 1 lb/in or 1 N/cm. The pressure at full pump flow is the pressure level that is specified when referring to pressure setting of the relief valve. It is the maximum pressure level permitted by the relief valve.

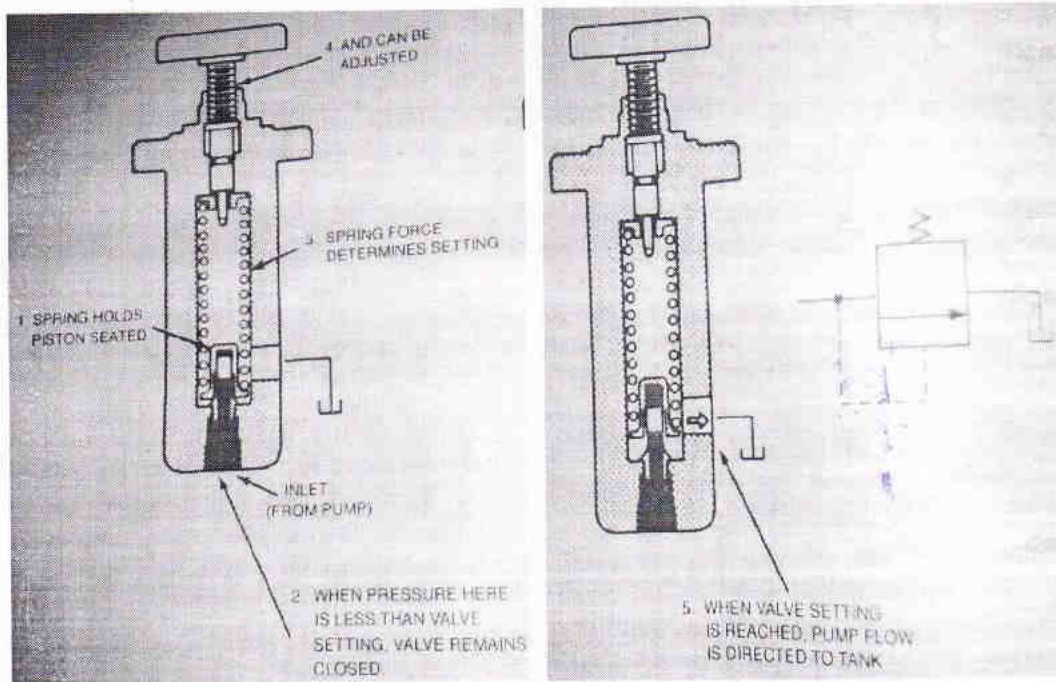

Fig 4.1 Pressure Relief Valve

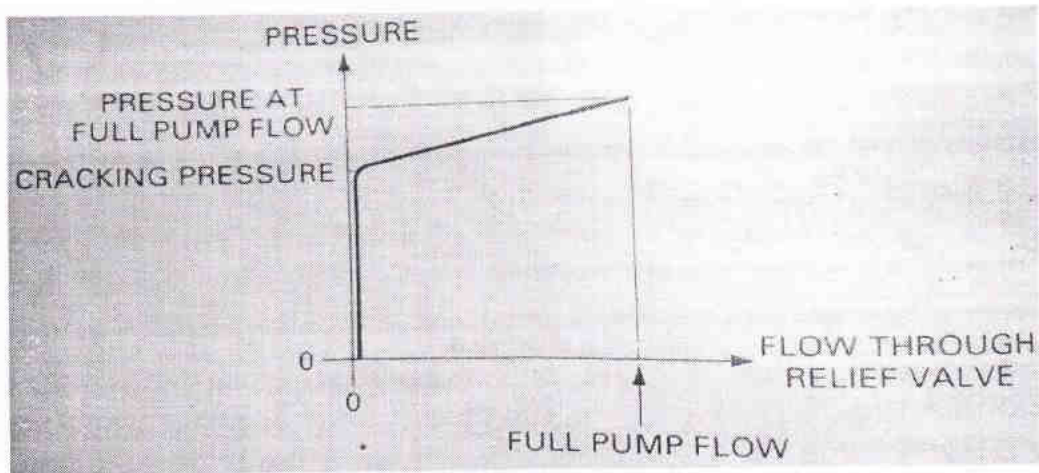

Fig 2

**Conclusion:**

The pressure relief valve characteristics are verified.

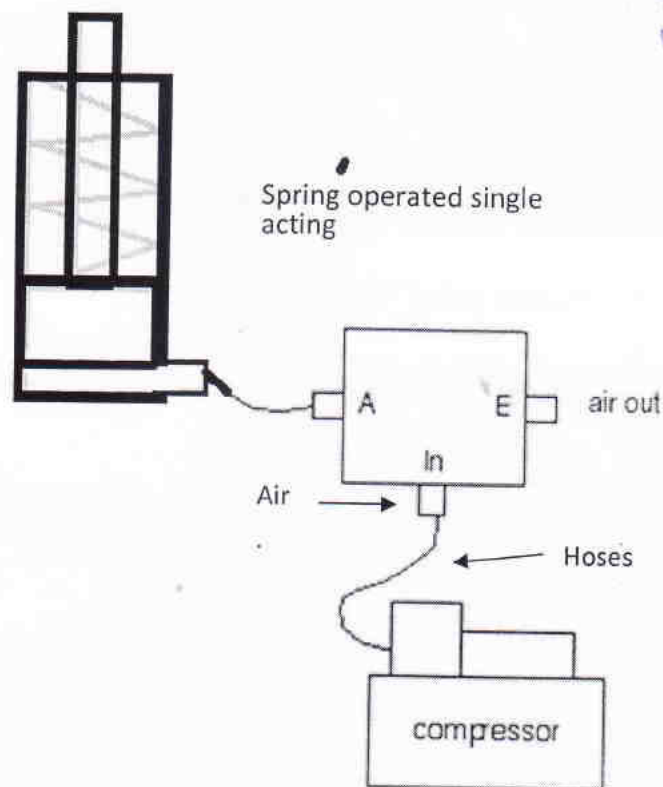

### Experiment No.5

**Aim:** To Study of Basic pneumatic circuit for the working of single and double acting cylinder

**A**      **Fig 4.2 Working of single acting cylinder operation**      **B**

**Theory**

Connect all components as per above shown fig. high pressurized air enters in 3X2 Valve manually forward positions of lever air enters in cylinder,  
 When lever operated backward the air exhausted in surrounding through port E due to force of compressed spring

**Forward motion** Due to pressurized air enters in cylinder.

**Backward motion**- spring pressure applied on area of piston surface

A) In fig. there is return movement of piston due to spring force. So air is delivered (exhausted) to atmosphere. Here 3x2 direction control valve is used. The air is exhausted to atmosphere through port 2 to 3.

B) In fig. there is forward movement of piston due to high pressure air. So air is entered to cylinder. And apply the force on piston surface Here 3x2 direction control valve is used. The air is entered in cylinder through port 1 to 2.

**Theory:**

In above pneumatic circuit we have used 4x3 D.C. valves. The valve is having four ports Port 1 is connected to compressor  
Port 3 is relieved to atmosphere through muffler.  
Port 4 & 2 are connected to pneumatic cylinder  
Forward position - At forward movement of piston, port 1 is connected to port 4 and port 2 is connected to port 3  
Retract position - At reverse movement of piston, port 1 is connected to port 2 and port 4 is connected to port 3

**Procedure**

- 1] Switch on the compressor to store high pressure air.
- 2] Connect the pipes as per circuit shown above.
- 3] Connect air reservoir to junction box
- 4] Check pressure level in tank to be full shown by indicator
- 5] Observe the reciprocating motion of Single acting and double acting cylinder.
- 6] Observe the rotary motion of hydraulic motor.

**Applications-** used in industries for fitting the component of job.

## EXPERIMENT NO. 6

### DESIGN OF SIMPLE HYDRAULIC SYSTEM

**AIM:** Study of simple hydraulic system

#### Hydraulic press circuit

The press circuit is shown in figure. The application of these valves, counter balance valve 'C' receives its signal from a point within counter balance valve structure. Valve 'c' is shown externally drained. It can be internally drained if there is to be no resistance on the cylinder line where when the flow is directed /diverted to the tank. If there is a question as to the amount of back pressure that may be encountered it is safest to provide an external drain.

Valve 'D' in figure is a sequence valve. The signal is taken from ahead of the valve and is picked up within the valve envelope. The drain in this valve must be independently connected to the tank because there will be pressure exerted on the discharge of the valve.

Valve 'E' is used in the circuit as an unloading valve. It will be externally piloted and externally drained if there is any resistance the return to the tank port. If needle valve 'K' were on the upstream side of valve 'E', the latter could be internally drained. With valve 'K' on the downstream side as shown in figure spig pocket must be externally drained so that back pressure does not provide an additive pressure to the spring. The needle valve in conjunction with unloading valve established the amount of two flow necessary to decompress the pressure in the proper time interval.

A safety valve 'G' is used at the rod end of the jack ram to avoid accidental intensification of pressure. The variable delivery pump has a pressure compensator to short stroke the pump. The pump provides pressurized fluid for the circuit. Full flow volume is available for rapid pressure movement. The pressure compensated short-strokes the pump when a desired maximum pressure is attained.

Valve 'A' is safety valve in functions only if the pump compensating mechanism fails. This valve would be adjusted to pressure value about 20% higher than that established by the pump limiting mechanism. Valve 'B' is directional control valve. It is solenoid control valve,

*Hydraulic & Pneumatics (BE, 2015 Course)*  
*Laboratory Manual*

hydraulic actuated unit. When side 1 is actuated it direct fluid to the head end of the small pilot cylinders or jack ram. Valve 'D' will prevent fluid flow into main ram until certain minimum pressure is reached. The centre block of the descriptive symbol of valve 'B' shows that the cylinder lines to the main ram and jack rams are connected together in neutral position of the valve. The pressure port is blocked in neutral. Lines into block to left indicate that as side 1 directs pressure source to main ram and head end of jack rams, the fluid from rod end of jack ram is directed to reservoir through counter balance valve 'C'.

The valve spool 'B' is used to block the ports in neutral, the weight of main ram and platens can cause the machine to close to fast and damage the machine parts when valve 'B' is shifted further. If spool in 'B' were to develop a slight leak, there might be undesirable movement of machine members. For this reason, it is usual to relax the fluid to both, top and bottom of main cylinder and hold the ram in position with counter balance valve as shown top the circuit position of valve 'C'.

If for any reason, valve 'C' is failed to open, fluid will be locked within rod end of the jack ram. The resistance caused by the blocked fluid would cause supply fluid to open a path through valve 'D' and full force would be exerted on the main ram.

When the platens meet and resistance cause rise in fluid pressure, in flow from pump diverted through valve 'D' at its set value and full pressure will effect on both jack rams and main ram. Full tonnage will be then provided between platens. Next, the compensator on the ump establishes maximum pressure and pressure 'H' and pressure 'H' creates a signal at pressure value somewhat less than the maximum value created by the pump control. The signal from pressure switch 'H' will start a timer that times out at predetermined period. This de-energizes side 1 of valve 'B' and activated side 2. Fluid is directed to side 2 to rod side of the jack rams through check valve around valve 'C'. This check valve may build integral with valve 'C'.

The pressure opens valve 'E', a relatively small two way valve, that allows all stresses of the pressure to be relieved and pressure to drop to low value. After this decompression, pilot pressure opens pilot check valve 'J' and permits fluid to exhaust from main ram. At this time, the platen can rise and to open to pressure, ready for unloading and reloading. When platen reaches upper level of travel, it connects a limit switch, electric eye or some other sensing device that

cause solenoid on directional control valve to de-energize. De-energizing solenoid causes platen to stop its upward travel.

## **Experiment No. 7**

### **Design of simple pneumatic system**

**Aim:** Study of simple pneumatic systems used in practice such as Braking system, vibrators, drilling, chisels etc

**Theory:**

Pneumatics is a section of technology that deals with the study and application of pressurized gas to produce mechanical motion. Pneumatic systems, that are used extensively in industries, and factories, are commonly plumbed with compressed air or compressed inert gases. This is because a centrally located and electrically powered compressor, that powers cylinders and other pneumatic devices through solenoid valves, can often provide motive power in a cheaper, safer, more flexible, and more reliable way than a large number of electric motors and actuators. Pneumatics also has applications in dentistry, construction, mining, and other areas.

**(a) The advantages of pneumatic systems**

Pneumatic control systems are widely used in our society, especially in the industrial sectors for the driving of automatic machines. Pneumatic systems have a lot of advantages.

(i) High effectiveness (ii) High durability and reliability (iii) Simple design (iv) High adaptability to harsh environment (v) Safety (vi) Easy selection of speed and pressure (vii) Environmental friendly (viii) Economical

**(b) Limitations of pneumatic systems**

Although pneumatic systems possess a lot of advantages, they are also subject to many limitations.

(i) Relatively low accuracy (ii) Low loading (iii) Processing required before use

(iv) Un-even moving speed (v) Noise

**Principles of pneumatic control**

**(a) Pneumatic circuit**

*Hydraulic & Pneumatics (BE, 2015 Course)*  
*Laboratory Manual*

Pneumatic control systems can be designed in the form of pneumatic circuits. A pneumatic circuit is formed by various pneumatic components, such as cylinders, directional control valves, flow control valves, etc. Pneumatic circuits have the following functions:

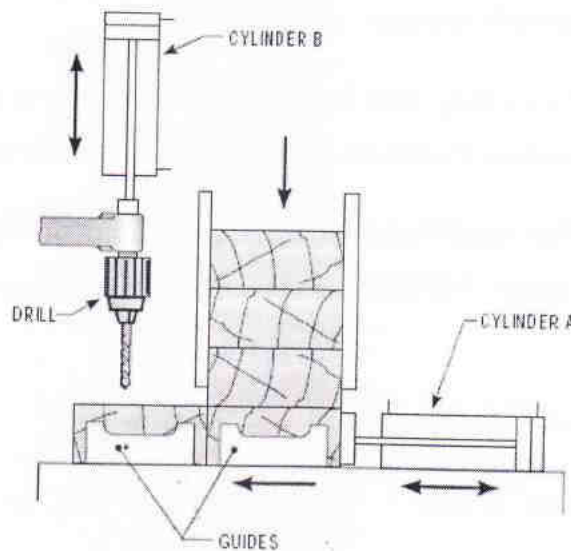

1. To control the injection and release of compressed air in the cylinders.
2. To use one valve to control another valve.

**(b) Pneumatic circuit diagram**

A pneumatic circuit diagram uses pneumatic symbols to describe its design. Some basic rules must be followed when drawing pneumatic diagrams.

**Case Study: Pneumatic system used in Drilling:**

Fig. 1 shows the schematic representation of actually operation of drilling. In this the actuation sequence followed is A+, B+, A-, B-.

**Fig.7.1: Typical Pneumatic Circuit**

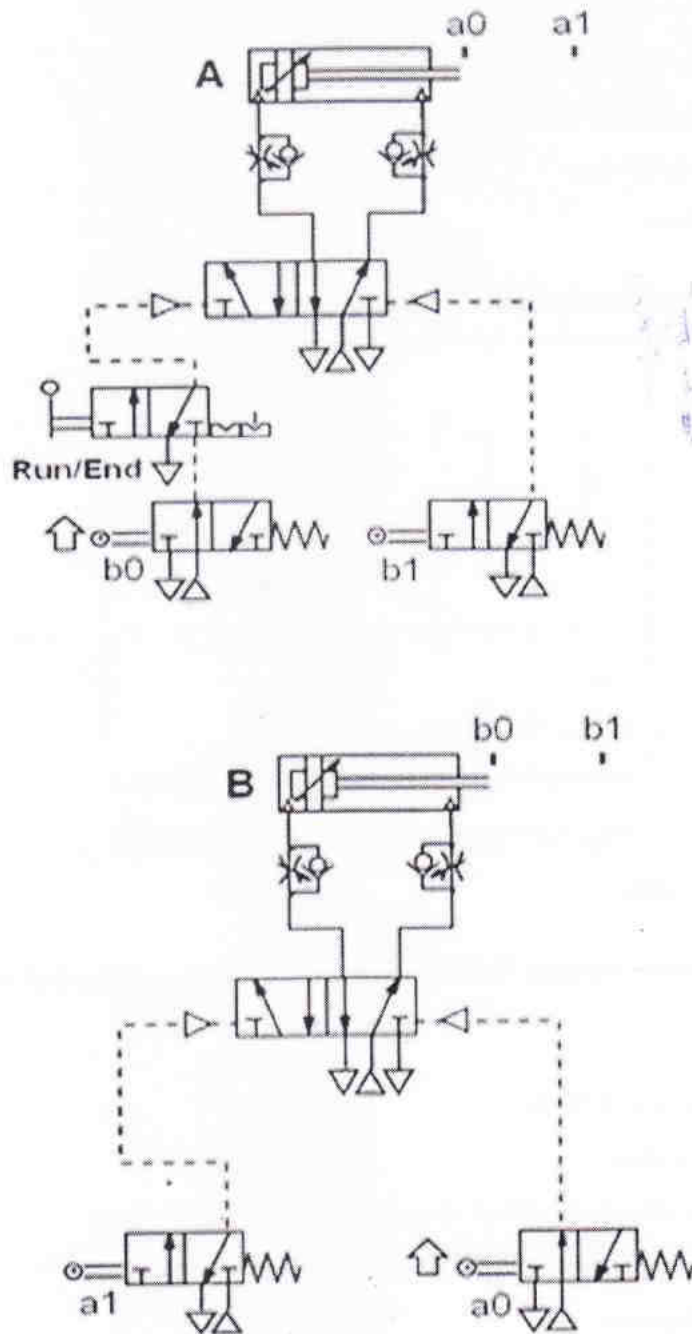

Fig. 7.2 Pneumatic Circuit diagram for drilling.

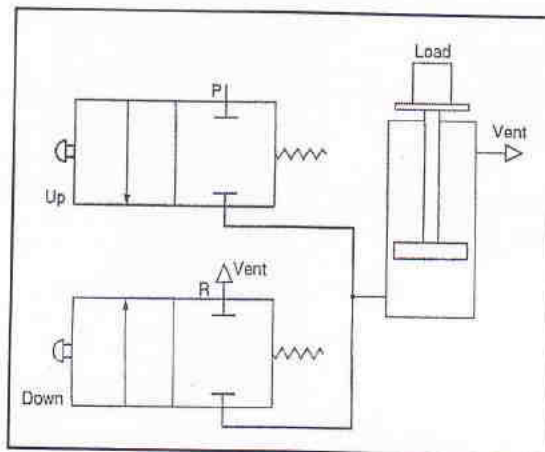

The two cylinders A and B are to perform a simple repeat pattern sequence as follows: A+ B+ A- B-  
 B-Apply the rule "The signal given by the completion of each movement will initiate the next movement"

*Hydraulic & Pneumatics (BE, 2015 Course)*  
*Laboratory Manual*

Components of the system:

1. 4/2 Pneumatic directional control valve
2. 3/2 Manually operated directional control valve
3. Double acting cylinder
4. Flow control valve

**Case Study2: Pneumatic Lift System:**

**Fig. 7.3 Typical Pneumatic Lift Circuit**

Components of the system:

The pneumatic lift system contains the following elements which are needed to carry out lifting work.

1. 2/2 Directional Control Valve
2. Single Acting Cylinder
3. Compressor (Not shown in circuit diagram)
4. Pressure Relief Valve (Not shown in circuit diagram)

Function of the Components:

1. 2/2 Directional Control Valve: It consists of a manually operated 2/2 directional control valve, which is normally at an open position. For lifting purposes, the valve is brought into a closed position and the lifting operation takes place. The pressure is adjusted according to the load to be lifted.

*Hydraulic & Pneumatics (BE, 2015 Course)*  
*Laboratory Manual*

2. Single Acting Cylinder: This contains arrangement for placing the load on the rod, which is connected directly to the piston.
3. Compressor: Its output is set according to the load requirement.
4. Pressure Relief Valve: Its function is to regulate the pressure in the system.

**Conclusion:**

To study the any pneumatic system we need to follow the sequence of 1) Listing Various Components, 2) Knowing their functions, 3) Draw the circuit diagram, 4) Check the circuit logic.

## Details of Experiment No. 08

### Case Study: Mechatronic System

For Case study Group of student has to study the given system from Mechatronics point of View.

You have to find out name of all Sensors used in the System with their detail technical configuration and logic used in the system.

You may use Book Named "Mechatronics in Action"/ Internet / Research Paper / Show Rooms. Put the name of Reference against your information collected.

Do not collect Generalised information but go for Specific information from Mechatronics, Sensors, actuators point of view.

परिपत्रक क्र. ०४/२०२१

विषय : ऑक्टोबर/नोव्हेंबर, २०२० (नियोजन एप्रिल/मे, २०२१) परीक्षेच्या आयोजनाबाबत.  
संदर्भ : कोविड-१९ च्या पार्श्वभूमीवर विद्यापीठ अधिकार मंडळाने घेतलेले निर्णय.

कोविड-१९ च्या प्रादुर्भावाच्या पार्श्वभूमीवर विद्यापीठाच्या अधिकार मंडळांनी निश्चित केलेल्या मार्गदर्शक तत्वानुसार प्रथम वर्ष ते अंतिम वर्षातील विद्यार्थ्यांच्या ऑक्टोबर/नोव्हेंबर, २०२० या परीक्षांचे ऑनलाईन पध्दतीने नियोजन करण्यात येत आहे. याबाबतची मार्गदर्शक तत्वे व सूचना खालीलप्रमाणे आहेत.

१. प्रथम वर्ष ते अंतिम वर्षातील विद्यार्थ्यांच्या ऑक्टोबर/नोव्हेंबर, २०२० सर्व अभ्यासक्रमांच्या ऑनलाईन पध्दतीने परीक्षांचे नियोजन दिनांक १० एप्रिल, २०२१ पासून करण्यात आले आहे. या परीक्षा फक्त Online बहुपर्यायी प्रश्नांद्वारे (MCQ), एक तासाची परीक्षा अशा पध्दतीने घेण्यात येतील. Online पध्दतीने होणा-या बहुपर्यायी प्रश्न (MCQ) स्वरूपाच्या परीक्षा ह्या ५० गुणांच्या ६० मिनिटे (एक तास) कालावधीच्या राहतील. यासाठी ६० बहुपर्यायी प्रश्न (MCQ) दिले जातील त्यामधून ५० प्रश्नांची अचूक उत्तरे ग्राह्य धरण्यात येतील.
२. या परीक्षांकरिता बहुतांश अभ्यासक्रमांमधील (Programmes) पाठयक्रम (Syllabus) १०० टक्के पूर्ण झाला असल्याने त्या अभ्यासक्रमांच्या परीक्षा ह्या १०० टक्के पाठयक्रमांवर होतील. तसेच बी.ए., बी.कॉम. हे वार्षिक अभ्यासक्रम व बहिःस्थ यांच्याही परीक्षा १०० टक्के अभ्यासक्रमांवर होतील.
३. व्यावसायिक अभ्यासक्रमांचे शैक्षणिक वर्ष २०२०-२१ चे प्रथम सत्र दिनांक ६ फेब्रुवारी, २०२१ पासून सुरु झालेले आहे. जसे की, प्रथम सत्र वास्तुशास्त्र, औषधनिर्माणशास्त्र, अभियांत्रिकी, विधी, एम.एड, एम.पी.एड, बीएससी-बी.एड, बी.ए.-बी.एड या अभ्यासक्रमांच्या परीक्षा संबंधित अभ्यास मंडळांकडून प्राप्त सूचनेनुसार प्रथम घटकापासून (युनिट) सुरु होणा-या ७० टक्के अभ्यासक्रमांवर होतील.
४. प्रथम सत्राच्या परीक्षांसाठी फक्त लेखी परीक्षांचे (Theory Papers) गुण विद्यार्थ्यांना Students Profile System मार्फत उपलब्ध करून दिले जातील. नजिकच्या कालावधीमध्ये संबंधित विद्यार्थ्यांचे टप्प्याटप्प्याने निकाल जाहीर होतील. त्या निकालाच्या अनुषंगाने टप्प्याटप्प्याने मार्च/एप्रिल, २०२१ परीक्षेसाठी परीक्षा आवेदनपत्र उपलब्ध करून दिले जातील. तथापि, ऑक्टोबर/नोव्हेंबर, २०२० व मार्च/एप्रिल, २०२१ या परीक्षांची गुणपत्रके/श्रेयांक पध्दतीने एकत्रितरित्या नंतर कितरीत केली जातील.
५. खाली नमूद केलेल्या प्रथम वर्षाच्या अनुशोषित/नियमित (असल्यास) अभ्यासक्रमांच्या परीक्षा महाविद्यालय/परिसंस्था स्तरावर आयोजित करण्यात याव्यात.

उपरोक्त परीक्षांचे आयोजन केंद्र व राज्य शासनाने शासनाने कोविड-१९ च्या पार्श्वभूमीवर निश्चित केलेल्या मार्गदर्शक सूचनांप्रमाणे आरोग्योची संपूर्ण काळजी घेऊन ऑनलाईन/ऑफलाईन (जसे शक्य होईल तसे) पध्दतीने बहुपर्यायी प्रश्न (MCQ) स्वरूपाच्या परीक्षा या ५० गुणांच्या ६० मिनिटे (एक तास) कालावधीच्या दिनांक १० एप्रिल, २०२१ पासून महाविद्यालय/परिसंस्था स्तरावर आवश्यक त्या उपलब्ध सुविधांचा वापर करून करण्यात यावे. यासाठी ६० बहुपर्यायी प्रश्न (MCQ) दिले जातील त्यामधून ५० प्रश्नांची अचूक उत्तरे ग्राह्य धरण्यात यावेत. या परीक्षांचे वेळापत्रक महाविद्यालय/परिसंस्था यांचे संकेतस्थळावर प्रसिध्द करण्यात यावे व याबाबतचा सविस्तर तपशील परीक्षा-समन्वय कक्षास सादर करण्यात यावा. तसेच यामधील अनुशेषित व नियमित परीक्षार्थींचे पेपर एकाच दिवशी येणार नाहीत याची संपूर्ण काळजी महाविद्यालय/परिसंस्था यांनी घ्यावी.

६. इन-सेमिस्टर, ऑनलाईन, संशानल परीक्षा (लेखी परीक्षेच्या विषयांसाठी व अभियांत्रिकी अभ्यासक्रमातील Fundamentals of Programming Languages या विषयांसाठी) महाविद्यालय/परिसंस्था स्तरावर उपलब्ध सुविधांचा वापर करून घेण्यात याव्यात. याबाबतचे वेळापत्रक महाविद्यालय/परिसंस्था स्तरावर निश्चित करून त्यानुसार विद्यार्थ्यांना अवगत करण्यात यावे. इंटरनल मार्कसू, वेब पोर्टल सुविधा वापरून विद्यार्थ्यांना या परीक्षांत मिळालेले गुण विद्यापीठाकडे दिनांक १० एप्रिल, २०२१ पर्यंत पाठविण्यात यावेत.
७. शैक्षणिक वर्ष २०२०-२१ मध्ये प्रथम ते द्वितीय सत्रासाठी एकत्रितरीत्या प्रात्यक्षिक, मौखिक, सेमिनार, मिनी प्रोजेक्ट्स, प्रोजेक्ट्स व डेझरटेशन परीक्षांचे आयोजन त्या त्या अभ्यासक्रमातील विद्यार्थ्यांच्या प्रथम सत्राच्या दिनांक १० एप्रिल, २०२१ पासून सुरु होणा-या विद्यापीठाच्या ऑक्टोबर/नोव्हेंबर, २०२० परीक्षांच्या शेवटच्या पेपरनंतर लगेचच ऑनलाईन/ऑफलाईन पध्दतीने करण्यात यावे. त्याकरिता वेगळे परिपत्रक निर्गमित केले जाणार नाही. या प्रात्यक्षिक व इतर उल्लेखित परीक्षांचे गुण त्वरीत इंटरनल मार्कस वेबपोर्टल सुविधा वापरून भरण्यात यावेत. कुठल्याही प्रात्यक्षिक, मौखिक, सेमिनार, मिनी प्रोजेक्ट्स, प्रोजेक्ट्स व डेझरटेशन परीक्षांकरिता परीक्षा विभागाकडून बहिःस्थ परीक्षकांच्या नेमणूका अथवा महाविद्यालयांकरिता वेगळे वेळापत्रक पाठविले जाणार नाही. संबंधित विद्यार्थ्यांच्या प्रथम सत्राच्या ऑनलाईन परीक्षा पूर्ण झाल्यावर लगेचच मा.प्राचार्य/संचालक यांनी महाविद्यालय स्तरावर परीक्षकांच्या नेमणूका करून परीक्षांचे आयोजन करावे. या परीक्षांचे गुण इंटरनल मार्कस वेबपोर्टल सुविधा वापरून भरण्यासाठी सुविधा उपलब्ध करून देण्यात येईल. फक्त एम.सी.ए.व एम.बी.ए. व तत्सम अभ्यासक्रमांच्या प्रात्यक्षिकांसाठी बहिःस्थ पर्यवेक्षक विद्यापीठाकडून नेमण्यात येतील.
८. ऑक्टोबर/नोव्हेंबर, २०२० च्या परीक्षांचे वेळापत्रक दिनांक २५ मार्च, २०२१ पर्यंत विद्यापीठाच्या [www.unipune.ac.in](http://www.unipune.ac.in) या संकेतस्थळावर प्रसिध्द केले जाईल. या परीक्षा निर्धारित वेळेत पूर्ण होणे अनिवार्य असल्यामुळे विद्यापीठ अधिकार मंडळाने घेतलेल्या निर्णयानुसार विशेष बाब म्हणून बहुपर्यायी परीक्षांचे आयोजन सर्व रविवाराच्या दिवशीही करण्यात आलेले आहे याची कृपया नोंद घ्यावी.
९. प्रथम वर्ष ते अंतिम वर्षातील विद्यार्थ्यांच्या ऑनलाईन परीक्षांच्या बाबतीत आवश्यक ती सर्व माहिती विद्यार्थ्यांना एसएमएस व ई-मेल्वारे अवगत करण्यात येईल. मात्र यासाठी विद्यार्थ्यांचा नोंदणीकृत ई-मेल आयडी व मोबाईल क्रमांक कार्यान्वित असणे आवश्यक आहे.
१०. Online परीक्षेत काही तांत्रिक कारणाने खंड पडल्यास तेवढाच कालावधी संबंधित विद्यार्थ्यांला संगणकीय प्रणालीतून वाढवून दिला जाईल. यापूर्वी सोडविलेली उत्तरे ही सेव्ह होऊन खंड पडल्यास तेथून परीक्षा पुन्हा सुरु होईल.
११. Online परीक्षेची संपूर्ण माहिती होण्यासाठी सर्वसाधारण प्रश्नांवर आधारित सराव परीक्षांचे आयोजन (Mock Test/Practice Test) मुख्य परीक्षेपूर्वी दिनांक ७ एप्रिल, २०२१ पासून करण्यात येईल व तसे सर्व संबंधितांला अवगत करण्यात येईल.

१२. दिव्यांग विद्यार्थ्यांना शासन निर्णयप्रमाणे सोयी व सवलती देव राहतील. तसेच या विद्यार्थ्यांना परीक्षेसाठी २० मिनिटे अधिकचा वेळ देव राहिल.
१३. Online पध्दतीने होणा-या बहुपर्यायी प्रश्न (MCQ)परीक्षांसाठी छायांकित प्रत व पुनर्मूल्यांकनाची सुविधा उपलब्ध राहणार नाही.
१४. ज्या महाविद्यालयांकडून ज्या विद्यार्थ्यांचे इन सेमिस्टर, ऑनलाईन व सेशनल परीक्षांचे अंतर्गत गुण दिनांक १० एप्रिल, २०२१ पर्यंत विद्यापीठास प्राप्त होतील त्याच विद्यार्थ्यांचे निकाल फक्त ऑनलाईन पध्दतीने जाहीर करण्यात येतील व गुणपत्रके मार्च/एप्रिल, २०२१ च्या परीक्षांचे निकालाबरोबरच एकत्रित वितरीत करण्यात येतील याची नोंद घ्यावी.
१५. विद्यापीठ अधिकार मंडळाने मान्य केलेल्या परीक्षा आराखडयानुसार विद्यार्थ्यांच्या संबंधित परीक्षेसाठी गुणांचे रूपांतरण केले जाईल. उदा. अभियांत्रिकी अभ्यासक्रमासाठी परीक्षा आराखडयानुसार ७० गुणांची परीक्षा आहे. या अभ्यासक्रमांचे विद्यार्थी ऑक्टोबर/नोव्हेंबर, २०२० ची ऑनलाईन पध्दतीने ५० गुणांची बहुपर्यायी प्रश्नांवर आधारित परीक्षा देतील. या परीक्षेत ५० पैकी विद्यार्थ्यांस मिळालेले गुण गणितीय सूत्र वापरून ७० गुणांपैकी मिळालेल्या गुणांत रूपांतरित केले जातील.
१६. परिपत्रक क्र.१२५ अंतर्गत येणा-या अभ्यासक्रमांच्या परीक्षेचे नियोजन महाविद्यालय स्तरावर विद्यापीठाच्या परीक्षांच्या नियोजनाच्या धर्तीवर करण्यात यावे. स्वायत्त महाविद्यालय/संस्थांनी सर्व निवमांचे अनुपालन करून परीक्षा घेण्यात याव्यात.
- उपरोक्त परीक्षांचे आयोजन केंद्र व राज्य शासनाने शासनाने कोविड-१९ च्या पार्श्वभूमीवर निश्चित केलेल्या मार्गदर्शक सूचनांप्रमाणे आरोग्याची संपूर्ण काळजी घेऊन ऑनलाईन/ऑफलाईन (जसे शक्य होईल तसे) पध्दतीने बहुपर्यायी प्रश्न (MCQ) स्वरूपाच्या परीक्षा या ५० गुणांच्या ६० मिनिटे (एक तास) कालावधीच्या दिनांक १० एप्रिल, २०२१ पासून महाविद्यालय/परिसंस्था स्तरावर आवश्यक त्या उपलब्ध सुविधांचा वापर करून करण्यात यावे. यासाठी ६० बहुपर्यायी प्रश्न (MCQ) दिले जातील त्यामधून ५० प्रश्नांची अचूक उत्तरे ग्राह्य धरण्यात यावेत. या परीक्षांचे वेळापत्रक महाविद्यालय/परिसंस्था यांचे संकेतस्थळावर प्रसिध्द करण्यात यावे व याबाबतचा सर्विस्तर तपशील परीक्षा-समन्वय कक्षास सादर करण्यात यावा. तसेच यामधील अनुशोधित व नियमित परीक्षार्थींचे पेपर एकाच दिवशी येणार नाहीत याची संपूर्ण काळजी महाविद्यालय/परिसंस्था यांनी घ्यावी.
१७. सदर परीक्षांच्या आयोजनापूर्वी व परीक्षेदरम्यान येणा-या अडचणी व शंकांचे निराकरण करण्यासाठी विद्यार्थ्यांनी [sps.unipune.ac.in](http://sps.unipune.ac.in) मध्ये लॉगिन करून आपल्या तक्रारी नोंदवाव्यात, तसेच विद्यार्थ्यांनी त्यांच्या संबंधित महाविद्यालय/परिसंस्थेमध्ये संपर्क साधावा.

मा.प्राचार्य/संचालक/महाविद्यालयीन परीक्षा अधिकारी यांना विनंती करण्यात येते की, वरील मार्गदर्शक तत्वे व सूचनांचे अवलोकन करून याबाबत आपल्या महाविद्यालयातील सर्व शिक्षक, शिक्षकेतर सेवक व विद्यार्थी यांना आपल्या स्तरावरून सूचित करावे व त्यांच्या शंकांचे निरसन करून विद्यापीठास सहकार्य करावे.

## सावित्रीबाई फुले पुणे विद्यापीठ (पूर्वीचे पुणे विद्यापीठ)

परिपत्रक क्र. १२६/२०२०

विषय :- शैक्षणिक वर्ष २०२०-२१ च्या प्रथम सत्रासाठी (ऑक्टोबर/नोव्हेंबर २०२०)  
आयोजित करावयाच्या प्रात्यक्षिक/मौखिक/सेमिनार/प्रोजेक्ट/सेशनल परीक्षाबाबत..

कोविड-१९ करोना साथीच्या प्रादुर्भावामुळे विद्यापीठ संलग्नित सर्व महाविद्यालयातील शैक्षणिक उपक्रम प्रत्यक्षरित्या सुरु होऊ शकलेली नाहीत. त्यामुळे महाविद्यालयातील विद्यार्थी प्रयोगशाळा व इतर तांत्रिक साधनसामुग्रीचा उपयोग करून प्रात्यक्षिके करू शकलेली नाहीत. अशा परिस्थितीत महाविद्यालये नियमित सुरु झाल्यानंतरच ही प्रात्यक्षिके घेण्यात येणार आहेत. या सर्व अडचणीची चर्चा सावित्रीबाई फुले पुणे विद्यापीठाच्या विविध अधिकार मंडळाच्या सभेत करण्यात आली. यासंदर्भात विद्यापीठ अधिकारमंडळाने घेतलेल्या निर्णयानुसार कळविण्यात येते की, सर्व संलग्नित महाविद्यालयातील नियमित (Fresh) विद्यार्थ्यांच्या शैक्षणिक वर्ष २०२०-२१मधील प्रथम व द्वितीय सत्राच्या प्रात्यक्षिक/मौखिक/सेमिनार/प्रोजेक्ट/सेशनल इत्यादी महाविद्यालय स्तरावरील घेण्यात येणा-या सर्व (लेखी/तोंडी) परीक्षा एकत्रितरीत्या शैक्षणिक वर्ष २०२०-२१ च्या द्वितीय सत्राच्या (मार्च/एप्रिल २०२१) परीक्षा समवेत सत्रनिहाय स्वतंत्रपणे घेण्यात याव्यात.

तसेच या नियमित विद्यार्थ्यांचे परीक्षा आवेदन पत्र भरतांना Online Exam Form भरण्याच्या प्रक्रियेमध्ये कोणताही बदल न करता लेखी परीक्षांबरोबर, प्रात्यक्षिक/मौखिक/सेमिनार/प्रोजेक्ट/सेशनल व इतर अभ्यासक्रमामध्ये नमुद परीक्षांची माहिती प्रचलित पध्दतीनुसार भरण्यात यावी. तथापि तांत्रिक अडचणी येऊ नये म्हणून या नियमित (Fresh) विद्यार्थ्यांचे प्रथम सत्रातील विद्यापीठ परीक्षांचे निकाल फक्त ऑनलाईन पध्दतीने जाहीर करण्यात येतील तसेच प्रथम व द्वितीय सत्राच्या मूळ गुणपत्रिका एकत्रितरीत्या द्वितीय सत्राच्या गुणपत्रकांसमवेत स्वतंत्रपणे एकत्र महाविद्यालयात पाठविण्यात येतील.

पुढे असेही कळविण्यात येते की, अनुशेषित (Backlog) विद्यार्थ्यांच्या प्रात्यक्षिक/मौखिक/सेमिनार/प्रोजेक्ट/सेशनल परीक्षा मात्र नेहमीप्रमाणे आयोजित करण्यात येऊन त्यांचे प्रथम सत्राचे निकाल लेखी परीक्षेच्या आयोजनानंतर जाहीर करण्यात येईल.

मा. प्राचार्य/संचालक, सर्व संलग्नित महाविद्यालये/मान्यताप्राप्त संस्था यांना विनंती करण्यात येते की, सदर परिपत्रकाचा आशय आपल्या महाविद्यालयातील विद्यार्थी, शिक्षक, शिक्षकेतर सेवक व इतर सर्व संबंधितांना अवगत करण्यात यावा व सदर परिपत्रकानुसार पुढील आवश्यक कार्यवाही करण्यात यावी.

3. If any student having issues related to LMS login credentials, then those students must approach Department LMS coordinator on or before 14<sup>th</sup> October, 2021 to resolve the issue well in advance.
4. Candidates are requested to keep checking their Social Media accounts for notification and modification in notification of examination schedule
5. No request for any special concession such as a change in time or any day fixed for the University In semester Examination on any ground shall be granted.

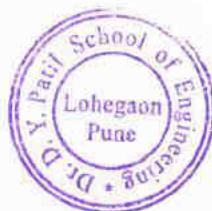

6. Candidates are requested to note the Day, Date and Time of every Paper on every day.
7. The student who failed to raise the issues/queries encountered before or during the examination within stipulated time will not be considered later. The student will be solely responsible for the academic loss, if any.
8. In case of any technical difficulties/ network issues, the concerned student must immediately contact to Department LMS Coordinator/ HOD/ Mentor/ Class Teacher of their class to resolve the issue.
9. A candidate can appear only once for examination.
10. Any malfunctioning found during the conduct of examination will be strictly punished
11. The Timetable for the Insemester Examination is as follows.

Question Number	Question	Marks
1.	What are Optical Transmitters? Explain with diagram working of LED with its characteristics. State its specifications & limitations over LASER.	
2.	What are the key requirements of point to point link in FOC? Explain link design with respect to choice of components & its characteristics.	
3.	Explain Rise time budget in OFC systems.	
4.	What is Multichannel Transmission System? Explain with diagram Multi-channel Amplitude Modulation technique.	
5.	What is EDFA? Explain the principle & operation of EDFA.	
6.	Compare PIN photo diode with APD.	
7.	What is the need of satellite communication? Explain with diagram basic structure of satellite communication.	
8.	What are the various orbital effects in communication system performance? Explain.	
9.	Explain with relevant details, satellite communication link design. Comment on important issues in Link design.	

10.	What is link budget? Explain performance objective for Digital Link. Derive the equation for Received power ' $P_r$ '.	
11.	What is Reliability & Space qualification? Explain with bath tub curve.	
12.	What is TTC? Explain in brief.	
13.	What is look angle determination? Explain.	
14.	Explain with diagram Uplink design of satellite communication.	
15.	Compare LEO, MEO, GEO satellite orbits.	
16.	What LNA? Explain.	
17.	What is system noise temperature & $\frac{G}{T}$ Ratio? Explain in detail.	
18.	State & explain the design considerations for downlink design of satellite communication.	
19.	Write short notes Satellite Antennas.	
20.	Write short notes Synchronous satellites.	
21.	What is equivalent Isotropic Radiated Power? (EIRP) explain in brief.	
22.	What are photodetectors? Explain with diagram working of Avalanche photodiode (APD).	
23.	What is linear scattering? Explain in brief. i) Rayleigh Scattering? ii) Mie Scattering.	
24.	What are graded index fibers? Explain with diagram how does ray transmission takes place in the graded Index Multimode fiber.	

25.	A Multimode Graded index fiber exhibits total pulse broadening of 0.1 $\mu$ sec over a distance of 15km. Estimate. i) The maximum possible Band width on the Link assuming no inter symbol Interference. ii) The pulse dispersion per unit length iii) the Bandwidth length product for the fiber.	
26.	What are various types of optical sources? Explain with diagram and characteristics working of LED. State its specifications, advantages and disadvantages.	
27.	What is EDFA? Explain.	
28.	What is the need of optical power budget? Explain Link power budget with the help of optical power loss model for a point to point communication.	
29.	What is multichannel transmission in optical (fibers) links? Explain any one method to achieve multichannel transmission.	
30.	What are the Elements of satellite communication? Explain with basic structure of satellite communication.	
31.	Compare LEO, MEO, & GEO satellite orbits with its application.	
32.	Explain various Look angles for satellite communication.	
33.	Describe the Launch sequence used in Inject satellite.	
34.	What are various losses in uplink and downlink analysis? Explain.	
35.	What are orbital effects in communication system performance? Explain	
36.	What are different types of Antennas used in satellite systems? Explain importance of each.	
37.	Explain the following i) Communication subsystem.	
38.	Explain Antenna subsystem.	

39.	Explain the procedure for satellite communication link Design	
40.	Explain any two. i) Attitude control system. ii) Orbital control system. iii) Tracking, telemetry and command system.	
41.	State and Explain Kepler's three Laws of planetary motion.	
42.	Explain advantages of optical fibers as communication media. Also state its drawbacks if any.	
43.	Define cut off wavelength of a single mode fiber. Determine the cutoff wavelength for a step index fiber to exhibit single-mode operation when the core refractive index and radius are 1.46 and 4.5 $\mu\text{m}$ , respectively, with the relative index difference being 0.25%. Assume $V_c = 2.405$ .	
44.	A multimode step index fiber has a relative refractive index difference of 1% and a core refractive index of 1.5. The number of modes propagating at a wavelength of 1.3 $\mu\text{m}$ is 1100. Estimate the diameter of the fiber core	
45.	Describe working principle with the aid of simple ray diagram i) Multimode Step Index Fiber ii) Graded Index Fiber Compare advantages and drawbacks of these fibers. Draw a diagram indicating major possible fiber refractive index profiles for the profile parameter $\alpha = 1, 2$ and $\infty$ .	

46.	<p>An optical fiber system is to be designed to operate over an 8 km length without repeaters. The rise times of the chosen components are:</p> <p>Source (LED): 8 ns</p> <p>Fiber: intermodal <math>5 \text{ ns km}^{-1}</math></p> <p>(pulse broadening) intra-modal: <math>1 \text{ ns km}^{-1}</math></p> <p>Detector (<i>p-i-n</i> photodiode): 6 ns</p> <p>From system rise time considerations, estimate the maximum bit rate that may be achieved on the link when using an NRZ format.</p>	
47.	Compare and contrast <i>p-i-n</i> and avalanche photo detectors as optical detector for optical fiber communication.	
48.	<p>Compare the following optical amplifiers based on working principle, amplification gain and drawbacks.</p> <p>i) SOA</p> <p>ii) EDFA</p>	
49.	Compare and contrast LED and ILD as optical source for optical fiber communication.	
50.	Which orbital parameter completely specify the orbit? Briefly describe each one of these.	
51.	Verify that geostationary satellite needs to be at a height of about 35780 km above the surface of the Earth. Assume radius of earth to be 6380 km and $\mu = 39.8 \times 10^{13} \text{ Nm}^2/\text{kg}$ .	
52.	Explain briefly various look angles for satellite earth station.	
53.	How does solar eclipse affect satellite communication?	
54.	Determine the maximum possible line of sight distance between two geostationary satellites orbiting the earth at a height of 36000 km above the surface of the Earth. Assume radius of earth to be 6380 km.	

55.	Describe the launch sequence used to inject satellite.	
56.	What are the different components of satellite's power supply subsystem? Briefly describe the role of each component.	
57.	Explain in detail any two of the following for orbital satellite i) Communication Subsystem ii) Antenna Subsystem	
58.	Explain double conversion transponder for 14/11 GHz band. Support your answer with suitable diagram and specify frequencies of local oscillators and IF amplifiers.	
59.	Explain Bath-tub curve for probability of failure with reference to satellite. Hence define MTBF. State relation of MTBF with probability of device failure.	
60.	Explain various redundancy connections used to mitigate device failure.	
61.	<p>a) A 4 GHz receiver has the following gains and noise temperatures  <math>T_m = 25 \text{ K}</math>, <math>T_{RF} = 50 \text{ K}</math>, <math>T_{IF} = 1000 \text{ K}</math>, <math>T_m = 500 \text{ K}</math>, <math>G_{RF} = 23 \text{ dB}</math>, <math>G_{IF} = 30 \text{ dB}</math>.</p> <p>i) Calculate the system noise temperature assuming that the mixer has a gain <math>G_m = 0 \text{ dB}</math>.</p> <p>ii) Recalculate the system noise temperature when the mixer has a 10 dB loss.</p> <p>iii) How can the noise temperature of the receiver be minimized when the mixer has a loss of 10 dB?</p> <p>iv) The system has an LNA with a gain of 50 dB. A section of lossy waveguide with an attenuation of 2 dB is inserted between the antenna and the RF amplifier. Find the new system noise temperature for a waveguide temperature of <math>300^\circ \text{ K}</math>.</p>	

62.	What do you understand by link budget of a satellite communication link? What type of information do you get from such an analysis'?	
63.	Explain various losses in downlink analysis.	
64.	A transponder of a Ku-band satellite has a linear gain of 127 dB and a nominal output power at saturation of 5 W. The satellite's 14 GHz receiving antenna has a gain of 26 dB on axis. Calculate the power output of an uplink transmitter that gives an output power of 1 W from the satellite transponder at a frequency of 14.45 GHz when the earth station antenna has a gain of 50 dB and there is a 1.5 dB loss in the waveguide run between the transmitter and antenna. Assume that the atmosphere introduces a loss of 0.5 dB under clear sky conditions and that the earth station is located on the -2 dB contour of the satellite's receiving antenna. If the rain in the path causes attenuation of 7 dB for 0.01% of the year, what output power rating is required for the transmitter to guarantee that a 1 W output can be obtained from the satellite transponder for 99.99% of the year if uplink power control is used?

1	A With neat diagram discuss gear pump	6
	B Draw ISO symbols for given component i. Pressure and temperature compensated valve ii. Pressure relief valve iii. Quick Exhaust valve iv. Unidirectional hydraulic motor v. Spring loaded accumulator vi. F-R-L Unit	6
	C State and Explain Pascal's law.	3
OR		
2	A Classify hydraulic Pumps & define various efficiencies of a pump	6
	B The displacement of pump operating at 1000rpm at a pressure of 10bar is 100cm. The input torque from prime mover is 120 nm. If it delivers 0.0015 m <sup>3</sup> /s of oil. Then determine i. Overall efficiency of the pump ii. Theoretical torque required to operate through pump iii. Volumetric efficiency	6
	C Explain advantages of hydraulic system over mechanical & electrical system	3

Question Number		Question	Marks
1	A	Explain end cushioning provided in hydraulic cylinder with neat sketch.	6
	B	Classify and explain hydraulic accumulators.	6
	C	Name three important mountings in hydraulic system with neat sketch.	3
OR			
2	A	Explain with the help of hydraulic circuit use of accumulator as a shock absorber	6
	B	An 8 cm diameter of cylinder has 4cm diameter of rod. If the cylinder receives flow at 100 LPM and 12Mpa , find the actuator speed and load carrying capacity in; i. Extension stroke ii. Retraction stroke	6
	C	What is the function of breather assembly in hydraulic reservoir?	3

Academic Year: 2020-21

Semester-I

1. Name of the event: Seminar on "Application of Strength of Materials in Automotive Sector"

Date and Time	15 <sup>th</sup> April 2021 & 12:00 pm to 02.00 pm
Event Venue	Microsoft Teams
Organized by	Mechanical Engineering Department
Audience	76 (S.E. Students)
Resource Person	Mr. Vishal Bhat

2. Event Contents:

1. Introduction to Modern technology in Automotive Sector
2. Why use it
3. Conceptualization
4. Marketing
5. Advantages and Application

3.1 Details of the event:

A Workshop on "Application of Strength of Materials in Automotive Sector" is organized on 15<sup>th</sup> April 2021 for Second Year students of Department of Mechanical Engineering, Dr D Y Patil School of Engineering, Lohegaon, Pune. The presentation will be conducted by Mr. Vishal Bhat, presently associated with John Deere Ltd., Pune. His valuable suggestions and guidance is useful for students to achieve their correct objective in future.

3.2 Introduction to Modern technology in Automotive Sector

In modern trend of increasing more power and torque demand from smaller vehicle, many engine manufacturers are moving towards developing new concepts in engine design. The requirement not only includes low weight and high strength material, but also

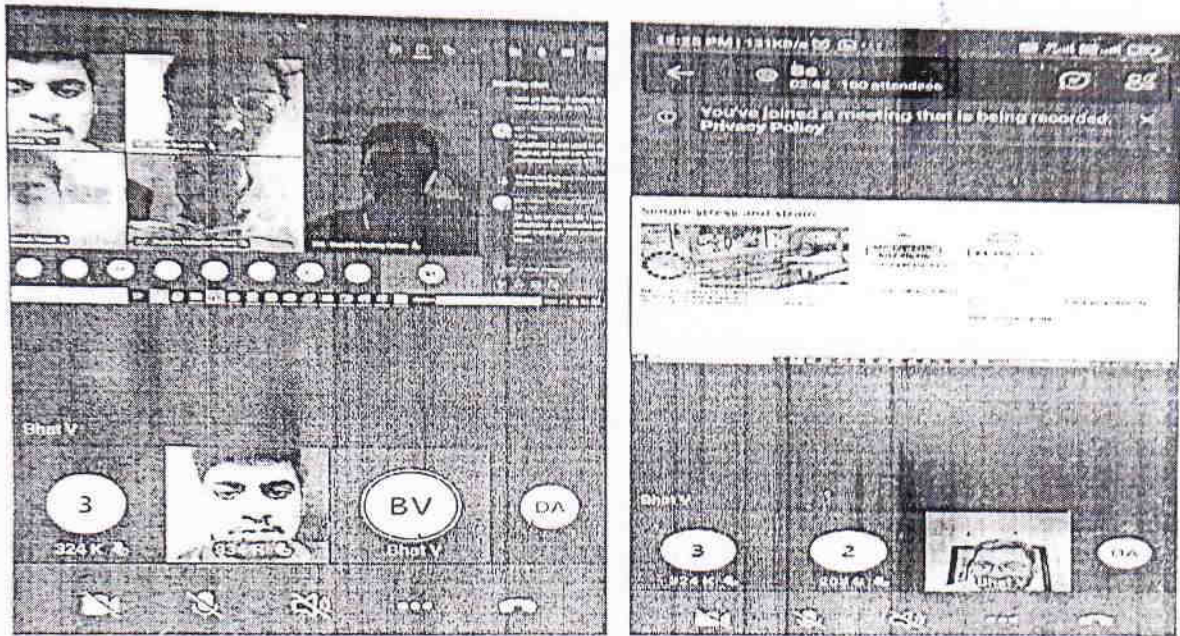

design techniques and manufacturing methodology. The seminar includes all the modern trend and concepts used in new generation engine design

Applications

- Reduce Development Costs
  - Cut traditional prototyping and tooling costs.
  - Identify design errors earlier.
  - Reduce travel to production facilities.

**SWOC**

**Strength:**

- 1. Adequate physical infrastructure exists
- 2. Committed management
- 3. Locational advantages being in city of Pune
- 4. Committed and dedicated faculty and staff
- 5. Strong administrative support to academic, cultural programs and student services
- 6. Attractive urban campus with well-equipped laboratories and physical infrastructure
- 7. Remedial classes organized for academically weak student

**Weakness**

- 1. Less number of students from out of state
- 2. College has not attracted externally funded research projects
- 3. **Lack of consultancy work.**
- 4. Research culture is missing in the college
- 5. A few faculties with Ph.D qualifications
- 6. Quality of publications is less and poor

**Opportunities**

- 1. Dr. D Y Patil brand name to be utilized effectively for marketing & communication
- 2. Resource generation through research and consultancy
- 3. Attracting funded projects
- 4. Skill development programs for teaching and non-teaching staff progression
- 5. Make DYP SOE technical Institution synergizing between all stake holders

**Challenges**

- 1. Availability of qualified faculty

2. High cost of delivering program
3. Regular investment to keep pace with emerging technologies
4. Competing with other technical institutions under SPPU university
5. Campus placements of all students with good packages

## Pneumatic System

# Pneumatic System

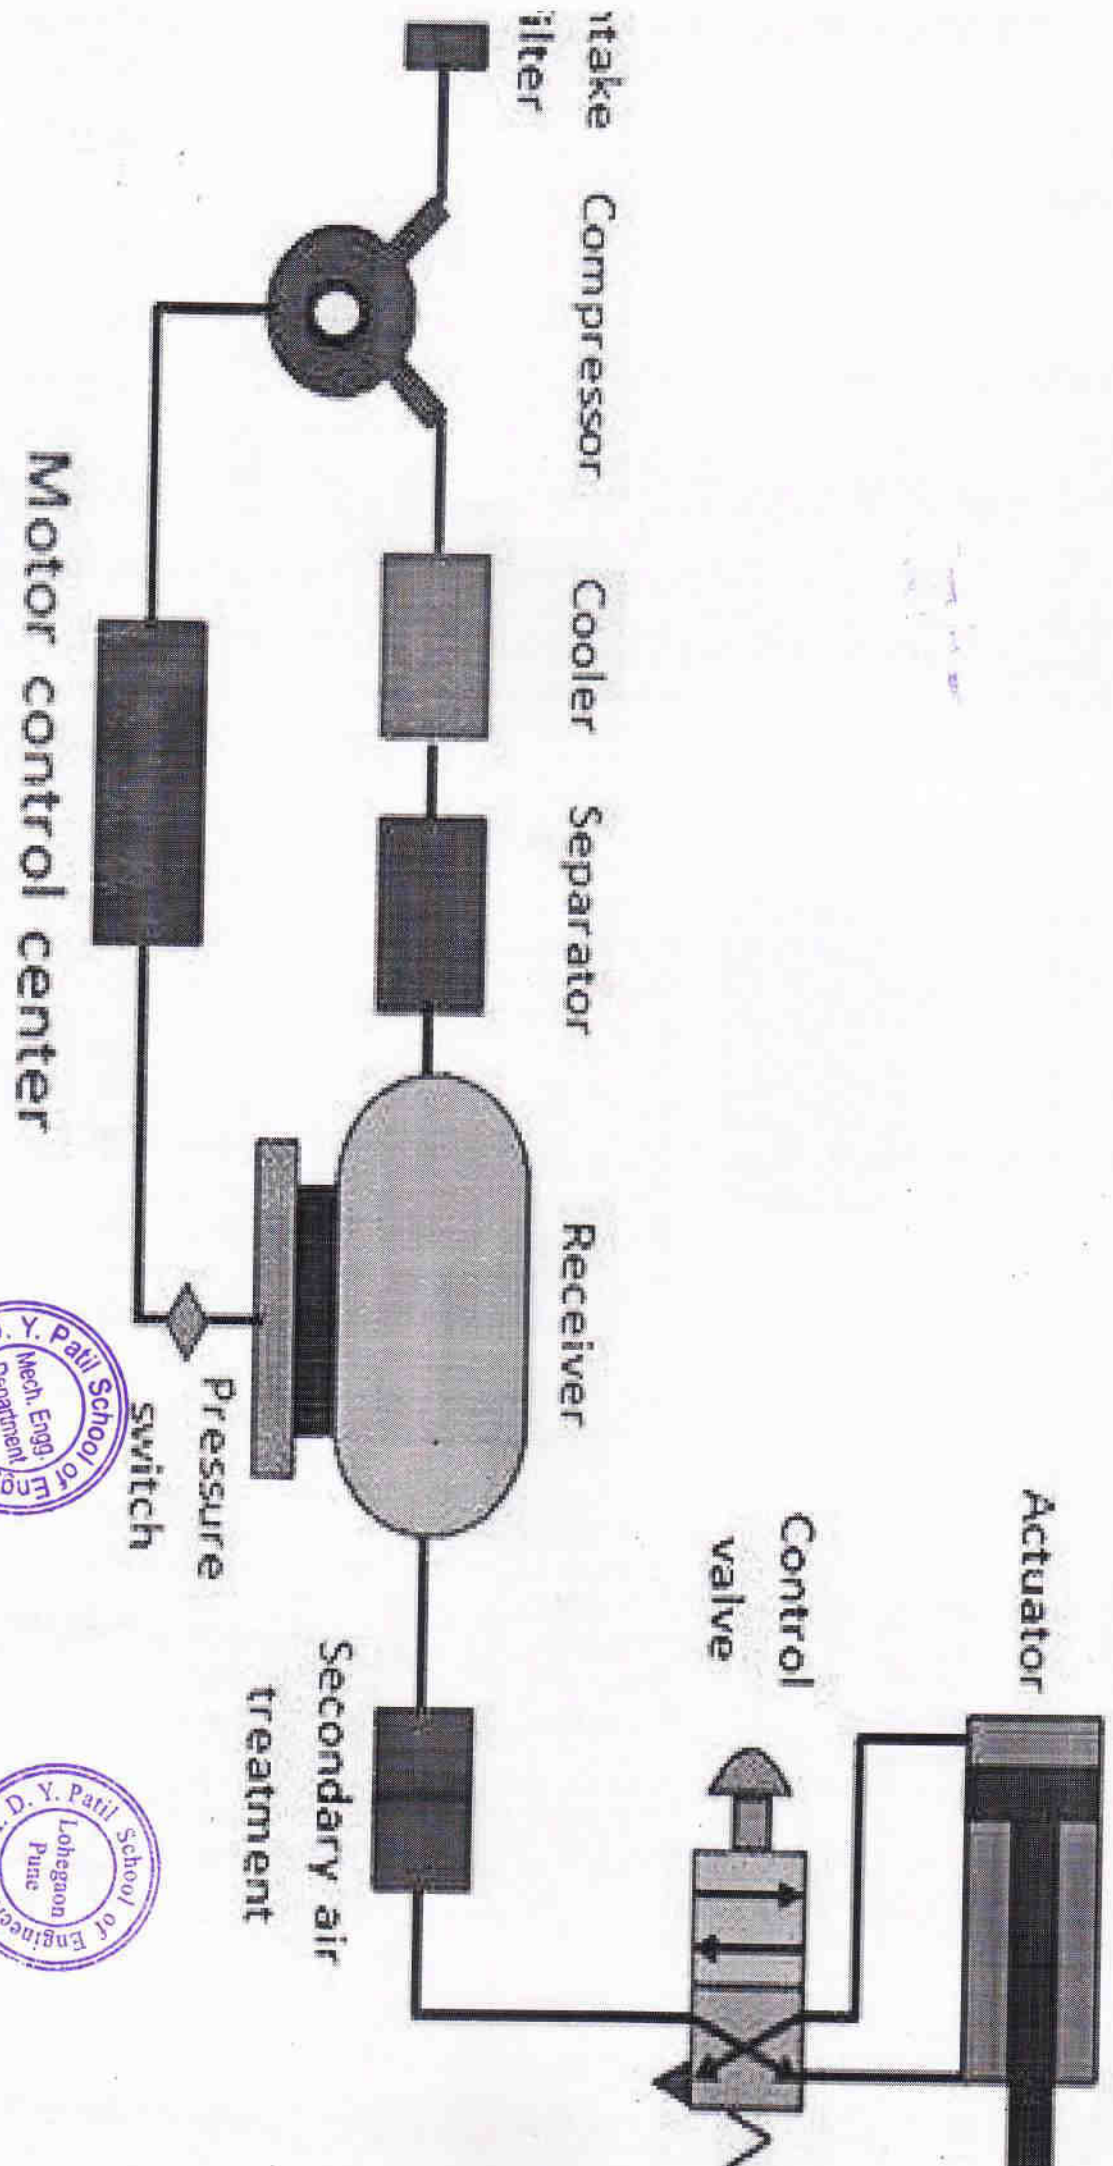

- Pneumatic systems use pressurized compressible fluids.
- Air is the most common compressible fluid although some gasses are also used in pneumatic drives, specially where the gas itself is one of the product or byproduct where the system is being used.
- However, air is the environment friendly, cheap, safe and readily available fluid media for pneumatics.
- For general purpose actuator drives manageable with low pressure (usually below 2 MPa) pneumatic system is preferred over hydraulic system, where pressure may be as high as 80 MPa.

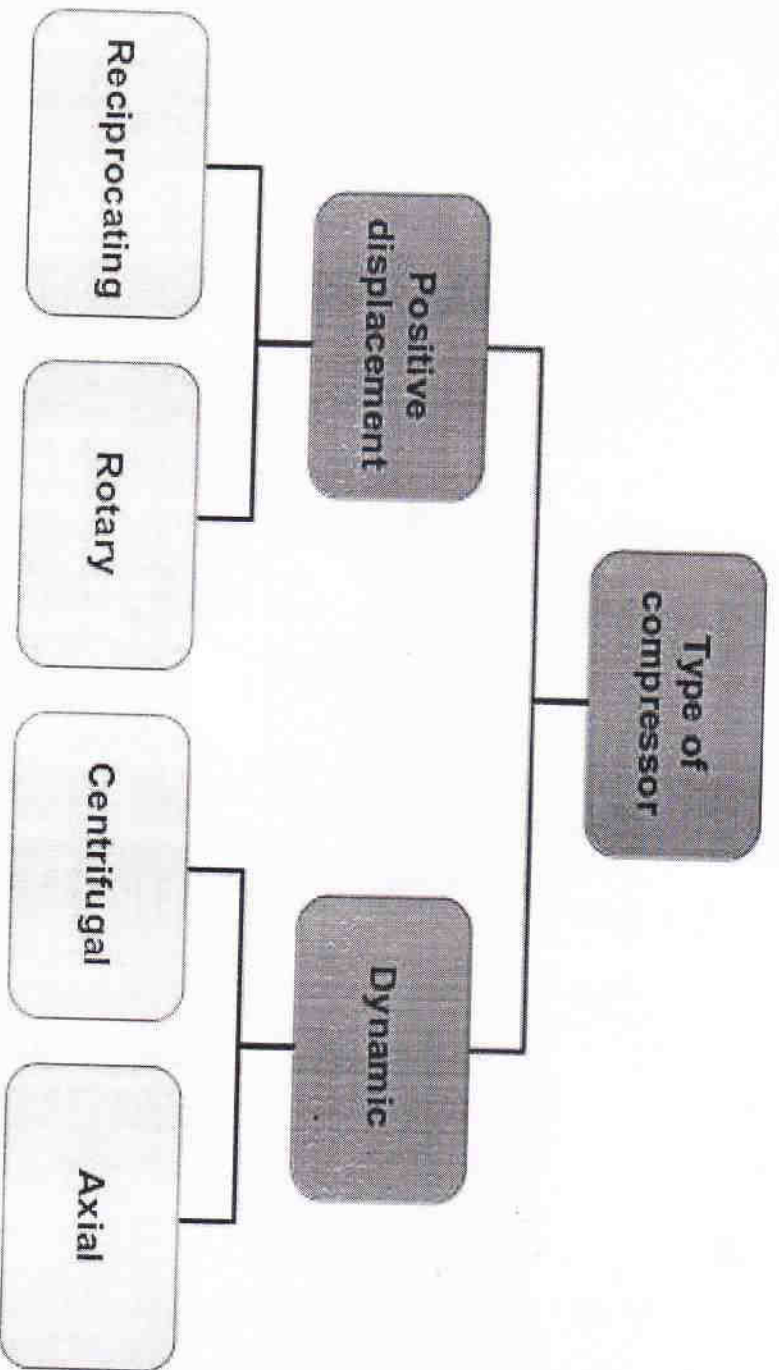

- ▶ However, position or actuation at controlled velocity is not achievable with compressible fluids.
- ▶ Pneumatic applications in such areas are rare and where hydraulic oil cannot be used due to environment reason.
- ▶ Also, less accurate performance is acceptable.
- ▶ In pneumatic systems compressors, typically the vane, lobe, screw or cylindrical piston type
- ▶ Positive displacement machines, are used to compress and store the air.
